VOL. XXXVII LITTLE ROCK, ARK., OCTOBER, 1932 No. 10

GENERAL SUMMARY

Cold weather overspread the State on the 4th and 5th with temperature departures ranging from 18° to 20° below normal in northern and central portions on the 5th, 26° being recorded in extreme northern sections of the State and 30° even in some southern border counties. Killing frost occurred in nearly all northwestern counties on the 6th and in the more mountainous portions elsewhere, while only scattered stations in the lowlands reported temperatures as low as 32°. The mean temperature for the State, based on the reports of 60 stations, was 60.8° which is 1.6° below normal. Only four of the stations with records of 10 years or more reported positive departures. Monthly means ranged from 56.0° at Marshall in the Ozarks to 65.8° at El Dorado near the southern border. The highest temperature reported was 94° at Magnolia on the 18th and at El Dorado and Rison on the 19th; the lowest, 26° at Lead Hill on the 6th. The greatest daily range was 49° at Camden on the 13th and at Carthage on the 18th.

The average number of rainy days was 6, the number being about the same for all stations. Heavy to excessive rains occurred over most northern and central districts on the 3d or 4th with several stations reporting over 3.00 inches on the 4th, while southern counties received generally less than 1.00 inch. Showers occurred in most sections about the 10th and 15th and more general rains on the 25th or 26th and on the 30th and 31st, 19 stations reporting an inch or more on the 25th or 26th and 36 stations reporting over 1.00 inch on the 31st. The average precipitation for the State for the 92 stations reporting was 3.41 inches which is 0.24 inch above normal. Of the stations with records of 10 years or more, 35 had negative departures and 33 positive. Monthly totals ranged from 0.91 inch at Springbank to 6.12 inches at Arlberg. The greatest amount measured in any 24-hour period was 3.75 inches at Jonesboro on the 4th. Rainfall was again deficient over most of the southern part of the State with many stations receiving only 1.00 inch to 1.50 inches.

The weather was favorable for the picking and ginning of cotton and for the gathering of all fall crops, and by the close of the month cotton picking was about completed except in the lowlands and corn nearly all gathered. The soil is still too dry in some southern sections for the planting of winter crops but elsewhere conditions are more favorable. T.A.M.

Tornado:—October 4th, 2:30 a. m., 7 miles north of Pine Bluff, from sw, width one-half mile, none killed nor injured, property damage $3,000.

Damage from Lightning:—Fayetteville, October 3d, two horses killed, barn and contents destroyed, loss $1,500; Fort Smith October 31st, $15,000 loss to Department Store and contents.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

OL. XXXVII LITTLE ROCK, ARK., NOVEMBER, 1932 No. 11

GENERAL SUMMARY

Much colder weather overspread the State on the 1st and 2d ith freezing temperatures extending to the southern border in ie southwestern portion and to south-central sections in the astern portion. Temperatures were again from 10° to 15° elow normal from the 10th to the 12th with killing frosts re-orted to the southern border. The coldest weather for the ionth for the western half of the State occurred at most sta-ons on the 16th when temperature departures were as much s 21° below normal, while in eastern sections the lowest oc-urred about the 29th. The mean temperature for the State, ased on the reports of 60 stations, was 46.7° which is 4.7° elow normal, all stations for which normals have been com-uted having negative departures. Monthly means ranged rom 41.6° at Marshall to 51.4° at El Dorado. The highest emperature reported was 82° at El Dorado on the 20th; the owest, 9° at Gravette on the 16th. The greatest daily range as 56° at Camden on the 20th.

November, 1932, with a precipitation of 1.98 inches is the riest November since 1920 when the State average was 1.95 nches. Monthly totals ranged from 0.48 inch at Fort Smith o 4.76 inches at Dumas with all stations except one with records f 10 years or more having negative departures. Seven stations ad monthly amounts of less than 1.00 inch and only one nore than 4.00 inches. The eastern half of the State received he greatest amount of rainfall while sections along the eastern lope of the Ozarks, in the west-central portion, and in the pper basin of the Ouachita River received the least. Snowfall ccurred in the northern portion of the State on the 10th, 5th, and 16th and at a few scattered stations in the eastern ortion on the 18th, 9 stations reporting a measurable amount or the month the average of which was 1.0 inch. Harrison, n Boone County, reported the greatest depth for the month, .0 inches, all of which fell on the 10th. Sleet occurred on he 10th and 15th in the northern half of the State and at two tations in the southeastern portion on the 17th. Glaze was eported from three stations in the Ozarks on the 15th but no lamage resulted. All streams in the State remained at low tages during the month.

The weather was favorable for the harvesting of fall crops luring the first four or five days of November but the frequent howers and the low temperatures during the middle of the nonth retarded most outdoor activities. The major portion f the cotton crop was picked during October but even at the lose of the month some remained in the fields in the lowlands. n some sections the soil is still too dry for fall plowing and he growth of winter crops, but in the greater portion of the State conditions are more favorable.

GENERAL SUMMARY

Temperatures were above normal the first six days of the onth with departures as high as 18° above normal, but the old weather which overspread the State on the 7th continued ntil the 20th with temperatures of zero or slightly lower reorted from a few stations in central and northern portions. Departures ranged from 10° to over 20° below normal during his two-week period with maximum temperatures below freezng over most of the State on the 12th, 13th, 15th, and 16th. he mean temperature for the State, based on the reports of 62 tations, was 39.9° which is 2.6° below normal, making this e coldest December since 1917. All stations for which norals have been computed showed negative departures. Monthly eans ranged from 35.2° at Dutton to 45.2° at Highland and exarkana. The highest temperature recorded was 79° at Morillton on the 2d and at Booneville on the 6th; the lowest, 5° elow zero at Marshall on the 17th. The greatest daily range as 54° at Dutton on the 1st.

December was a wet, rainy month with an average of 12 rainy ays, or 5 more than the normal. Rainfall was generally light moderate the first 7 days of the month, but excessive from e 22d to the 24th and on the 29th and 30th with numerous ations reporting over 4.00 inches the latter part of the month. est occurred over most of the State on the 9th and either sleet, ain or snow from the 10th to 16th with glaze forming over ost of the State during this period. Glaze was heaviest in uthern and eastern sections where telephone, telegraph, and ower lines were severely damaged, some towns being isolated r two or three days. An unusually large number of accidents ccurred in which many persons were seriously injured from lling on the ice-covered ground, resulting in at least two eaths. Travel everywhere was exceedingly hazardous, many chools were closed, and bus schedules were suspended in some stances in the southeastern portion of the State where condiions were the worst.

The average precipitation for the State for the 93 stations eporting was 7.86 inches which is 3.77 inches above normal, e average this year being exceeded only by that in 1892 when was 8.79 inches. Monthly totals ranged from 3.97 inches at ead Hill to 13.57 inches at Jessieville with stations in the orthwestern portion of the State receiving the least amount of ainfall, while precipitation was heaviest in the Boston Mounains and in the southeastern portion. All stations except two eported a measureable amount of snow the average of which as 3.7 inches. Snowfall was heaviest in the Boston Mounains and in central sections with Mount Ida reporting a monthy total of 11.5 inches. El Dorado in a southern border county eported 3.0 inches of sleet. The greatest 24-hour amount of ainfall was 6.53 inches at Bentonville on the 22d-23d.

T.A.M.

Losses from Windstorms, Glaze, Tornado, etc.

Heavy hail:--Salem, 6th, $1,000 damage to roofs of buildings; Thornburg, 7th, no report on damage.

Windstorms:--Night of 23d-24th, Clarksville, $1,000 damage to houses and barns; Hampton, $5,000 damage to buildings; Heber Springs, houses, barns, and garages damaged, loss $5,000.

Glaze:--$170,000 damage to Telephone and Telegraph lines from the 10th to the 16th in eastern and southern sections. Several thousand dollars damage to fruit trees, shrubbery, and buildings.

Tornado:--From Plum Bayou to England, 24th, 12:30 a.m., from sw, a narrow path 11 miles long, 12 injured, property loss $40,000.

Flood Loss:--On Arkansas River near Fort Smith $2,825; on Ouachita River near Arkadelphia $8,000.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

ol. XXXVII Little Rock, Ark., Year, 1932 No. 13

GENERAL SUMMARY

The mild weather of the latter part of 1931 continued during
nuary and February 1932, but decidedly colder weather over-
read the State on the 5th of March bringing the lowest tem-
rature of the winter of 1931-32 and the coldest for the entire
ar of 1932 in some sections. The minimum temperature of
at Sunset on the 9th is within 1° of the lowest temperature
er recorded in the State for March. Temperature averages
ere above normal from April to August, inclusive, but
ptember and the following months had negative departures.
ovember was considerably colder than the average, being the
e coldest since 1929, and December was the coldest December
nce 1917. The mean temperature for the year was 62.0°
hich is 0.7° above normal. Of the 62 stations for which nor-
als have been computed, 42 had positive departures, 9 neg-
ive, and 2 were normal. Annual means ranged from 56.8°
Dutton in the Ozarks to 66.0° at El Dorado in a southern
rder county. Extremes ranged from 5° below zero at Mar-
all on December 17th to 108° at Corning on July 16th.

The average precipitation for the State was 51.11 inches
hich is 2.89 inches above normal. Of the 70 stations with
cords of 10 years or more, 52 had positive departures and
negative. January was the wettest January on record sur-
ssing the correspondingly wet months of 1916 and 1930.
recipitation was also above normal in February but was below
r the next three months, May being the driest May since
25. June and July had positive departures but in August
d September rainfall was again below normal with a decided
ficiency in southern and extreme western portions of the
ate. Precipitation was slightly above normal in October, but
dry November followed with the lowest State average since
20, and December was the wettest December since 1892.
rom April 1st to September 30th the rainfall was 76% of the
rmal with the months of June and July supplying slightly
er 50% of the amount for the period. Annual amounts
nged from 33 39 inches at Cotter to 65.78 inches at Madison
St. Francis County. Positive departures occurred generally
the eastern half of the State and in the Arkansas River Val-
y, while stations on the northwestern slope of the Ozarks, in
rthern border counties, and along the southern border in the
uthwestern portion of the State received the least.

The last killing frost in spring occurred about March 15th
southern and central sections and about March 28th in
orthern border counties and the more mountainous portions.
he first killing frost in autumn occurred October 6th in north-
estern counties and in the Boston Mountains, and either
ovember 1st or about the 11th in other sections. The grow-
g season ranged from 175 days at Dutton in the Ozarks to
7 days at Highland. Only slight damage resulted in the
ll from frost, but the freeze in March, following an unusually
ild winter, killed practically the entire peach and pear crops
roughout the State and severely damaged all early truck
ops which had been planted much earlier than usual.

Tornadoes occurred in March, April, and October in which
people were injured and property valued at $136,500 de-
royed. Seven people were injured and considerable proper-
was damaged during windstorms but they were not unusual-
severe. Nine people were killed and three seriously injured
ring electrical storms and property valued at $48,000 de-
royed. Hailstorms occurred during the spring and early
mmer months and in December, doing considerable damage
crops and roofs of buildings.

WEATHER BY MONTHS

January;—This was the warmest January since 1923, the average being 5.2° above normal. The average precipitation was 9.67 inches, or 5.43 inches above normal, establishing a new record for this month. Rainfall was heavy in nearly all sections of the State and especially so in the Ouachita River basin and the southeastern portion of the State. Monthly totals ranged from 3.35 inches at Dutton to 16.51 inches at Crossett. Thousands of acres of land were submerged in the lower Ouachita River basin, a stage of 38.0 feet being reached at Camden on the 9th. The loss from high water during the month was $144,000 on the Ouachita River, $15,700 on the White, and $7,500 on the Arkansas.

February;—Temperatures were above normal and were freezing or below for only two days at Little Rock and three days at Fort Smith during the month, making this the third warmest February on record. The mean temperature was 52.0° which is 8.7° above normal with departures as high as 10° above normal in the northern half of the State. Fruit buds began developing much earlier than usual, and peaches, plums, and early strawberries were blooming in many sections by the close of the month. Precipitation was 1.42 inches above normal, with monthly totals ranging from 1.14 inches at Gravette to 8.14 inches at Prescott.

March:—Temperatures were as much as 20° above normal during the first four days of the month but the cold wave which overspread the State on the 5th lasted until the 15th, bringing temperatures as low as 18° to 20° even to southern border counties and departures as low as 30° below normal. All early truck crops were severely damaged. Peaches and pears were in bloom and these two crops were practically destroyed. Early strawberries were damaged and retarded but sufficient fruit buds were left to produce a good crop. Precipitation was slightly below normal, with monthly totals ranging from 1.63 inches at Harrison to 7.33 inches at Arkadelphia. The average amount of snowfall was 1.1 inches.

April:—The mean temperature was 63.8° which is 2.3° above normal, all stations having positive departures. Freezing temperatures occurred at only 5 stations located in the more mountainous portions and practically no damage resulted to growing vegetation from frost during the month. However, nights were cool during the middle and latter parts of the month and growth of most crops was retarded. Precipitation was decidedly deficient in nearly all portions of the State, only four stations having positive departures. Of the 93 stations reporting, 22 received less than 2.00 inches while 6 reported over 5.00 inches. Monthly totals ranged from 0.71 inch at Cotter to 7.02 inches at Marked Tree.

May:—The mean temperature was 69.5° which is 0.4° above normal while precipitation was deficient in practically all sections, this being the driest May since 1925. Monthly totals ranged from 0.28 inch at Gravette to 5.01 inches at Danville. Thirteen stations had less than 1.00 inch and 55 less than 2.00 inches while 3 had more than 4.00 inches. Wheat, oats, truck crops, and late strawberries were damaged by the dry weather but early strawberries yielded much better than usual.

June:—Although the highest temperature recorded was only 103°, one person died at De Witt on the 21st from heat prostration. The average precipitation for the State was 4.86 inches which is 0.76 inch above normal, but the distribution was irregular with most of the rainfall occurring during thunderstorms. Monthly totals ranged from 0.75 inch at Blytheville to 9.15 inches at Center Point, with the northeastern portion of the State and counties along the southern border again receiving the least amount of rain as they did in the preceding month. The average number of rainy days was 10, though one station reported 16 and four others 15 rainy days.

Lead Hill	Mar. 30	Oct. 6	190				

July:—Although temperatures were not unusually high, four persons died from heat prostration during the month and from the 10th to the 16th considerable loss of livestock was reported in Mississippi, Faulkner, and Phillips counties. Rainfall was excessive in many sections of the State during the first decade, with damage occurring in Faulkner and Pulaski counties. Monthly totals ranged from 1.67 inches at Ft. Smith to 12.31 inches at Thornburg. Temperatures were a little too high for corn during the second decade and in a few localities the soil was too dry.

August:—The mean temperature for the State was 1.7° above normal, while precipitation was 1.94 inches below normal. Heavy rains occurred in much of the northeastern portion of the State on the 3d or 4th but thereafter showers were generally light to moderate in the northern half, light at most stations in the southern, with Amity reporting no rain during the month and Camden and Carthage only 0.05 inch. Sections around Ft. Smith and in the Ouachita River basin received very little rain and by the latter part of the month deterioration of cotton was general in those areas. Cotton opened early because of the hot, dry weather.

September:—The average precipitation for the State was 2.54 inches which is 0.82 inch below normal. Rainfall this month like that of the preceding month was light in southwestern and extreme western portions and in the lower Ouachita River basin. Growth of cotton was stopped in southern and southwestern sections of the State due to lack of rain. Late corn was badly damaged in central, western, and southwestern portions. More favorable conditions prevailed in the eastern half of the State.

October:—Cold weather overspread the State on the 4th and 5th with temperature departures ranging from 18° to 20° below normal in northern and central portions on the 5th, 26° being recorded in extreme northern sections and 30° even in some southern border counties. Rainfall was again deficient over most of the southern part of the State with many stations receiving only 1.00 inch to 1.50 inches. The weather was favorable for the picking and ginning of cotton and for the gathering of all fall crops.

November:—The average precipitation for the State was 1.98 inches, making this the driest November since 1920 when the State average was 1.95 inches. Monthly totals ranged from 0.48 inch at Ft. Smith to 4.76 inches at Dumas, only one station having a positive departure. The weather was favorable for the harvesting of fall crops during the first four or five days but the frequent showers and the low temperatures during the middle of the month retarded most outdoor activities.

The departures from normal temperature and precipitation are computed only for stations having ten or more years record, but all complete reports are used in determining section means. T., less than 0.01 inch rain or melted snow. Reference letters ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing: for example ^{b} represents two days missing. † Also on later dates. ‡‡ Post-office addresses of these stations as follows:-Big Lake Outlet, Manilla, Ark., Freeman Springs, Dover' Ark.,Index, Route 5, Texarkana, Ark., Lutherville, R. F. D. No. 1, Lamar, Ark. Springbank, Doddridge, Ark.

December:—This was the coldest December since 1917. Cold weather overspread the State on the 7th and continued until the 20th with temperatures of zero or slightly lower reported from a few stations in central and northern portions. Sleet occurred over most of the State on the 9th and either sleet, rain, or snow from the 10th to the 16th with glaze forming over most of the State during this period. Telephone, telegraph, and power lines were severely damaged in southern and eastern sections. Travel everywhere was exceedingly hazardous. All stations except two reported a measureable amount of snow the average of which was 3.7 inches.

W. B. O.,Little Rock, Ark.—3-3-33-1300.

Corrections: 1932

Fort Smith, February temperature departure should be +8.5°; March mean temperature 48.0°; departure −4.6°. Total precipitation, Highland, January should be 11.07 inches; Mountain Home, July 2.49 inches. Searcy, December, minimum temperature on 19th should be 20°, lowest for month, 1° on 18th; mean minimum temperature 29.0°; mean temperature 38.8°; departure from normal −4.0°; annual, page 51, lowest for year. 1°, December 18th. The following precipitation departures should be inserted for the respective months: Amity, August −3.98; Batesville, September +0.40; Booneville, December +2.13; Fayetteville, April −2.36; Fulton, June +3.31; Hope, June +0.48; Lead Hill, April −2.19; Osceola, March +1.26; May −4.05; Pine Bluff, August −0.43; Pocahontas, March −1.23; Texarkana, May −3.58.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

Vol. XXXVIII Little Rock, Ark., January, 1933 No. 1

GENERAL SUMMARY

This was the warmest January since 1907 and the second warmest on record, surpassing the correspondingly warm month of 1923 by two-tenths of a degree. The daily mean temperature was below normal only for two days at Fort Smith and four days at Little Rock during the month. Daily departures ranged from 10° to over 25° above normal from the 16th to the 26th with the warmest weather occurring about the 19th or 20th in most sections. The coldest weather of the month occurred on the 1st in eastern and southern sections and on the 12th in the northwestern portion. The average temperature for the State, based on the reports of 61 stations, was 48.8° which is 7.5° above the mean for the past 43 years, all stations for which normals have been computed having positive departures. Several stations in west-central and northwestern portions had departures as high as 9° above normal and Booneville in Logan County 10° above. The highest temperature recorded was 81° at Warren on the 19th; the lowest, 11° at Marshall on the 1st. The greatest daily range was 44° at Crossett on the 3d.

Precipitation occurred on about three days in most sections of the State during the first half of the month and on six days during the latter half. From the 16th to the 22d moderate to heavy rains were general over the State with from 1.00 inch to more than 3.00 inches occurring at many stations on the 21st and 22d. Blytheville and Big Lake Outlet, in Mississippi County, reported a total of 5.50 inches and 4.20 inches, respectively, for the 21st and 22d. The average precipitation for the State for the 92 stations reporting was 3.67 inches which is 0.61 inch below the mean for the past 43 years. Monthly totals ranged from 1.65 inches at Mountain Home to 7.33 inches at Blytheville, with nearby stations showing a wide divergence in monthly totals. The greatest amount measured in any 24-hour period was 3.17 inches at Searcy on the 21st. Snowflurries were reported at Rogers in the northwestern portion of the State on the 6th and at several stations on the 14th, and traces of sleet at scattered stations on the 28th.

The weather was favorable for the growth of winter crops and truck was unusually good. A little plowing was done in some localities and some gardens and a few potatoes planted, but the soil was too wet in most sections. The warm weather caused the plum and peach buds to develop in central and southern sections but growth was checked somewhat by the cooler weather the last few days of the month.

T.A.M.

MISCELLANEOUS

Heavy Hail:—Booneville, 18th, considerable damage to roofs of buildings and tops of automobiles.

Flood Loss:—On the Black River, $500.

Miscellaneous Phenomena

Vol. XXXVIII Little Rock, Ark., February, 1933 No. 2

GENERAL SUMMARY

The mild weather of the preceding month continued for the first four days of February, but a serve cold wave, with drops in temperature exceeding 50° in some sections, overspread the State on the 7th-8th bringing temperatures as low as zero on the 8th nearly to the southern border in the southwestern portion of the State and as low as 13° below zero in the Ozarks. Temperatures continued below normal until the 15th but thereafter they were nearly continuously above. The average temperature for the State, based on the reports of 60 stations, was 41.5° which is 2.1° below the mean for the past 43 years. All stations except two for which normals have been computed had negative departures. Monthly means ranged from 36.0° at Calico Rock in the northern portion to 48.8° at Portland in a southeastern border county. The highest temperature recorded was 82° at Crossett on the 24th; the lowest, 13° below zero at Sunset on the 8th and at Lead Hill on the 11th. The greatest daily range was 52° at Lead Hill on the 11th.

The average precipitation for the State for the 91 stations reporting was 3.53 inches which is 0.16 inch above the mean for the past 43 years. Monthly totals ranged from 1.53 inches at Harrison and Lead Hill to 8.69 inches at Yancopin. Rainfall was generally below normal in the northern half of the State and decidedly above normal in southern border counties and in most of the southeastern portion. Malvern and Warren reported 17 rainy days while the State average was 10. Snow occurred in most sections of the State on the 8th and in all sections on the 10th, Piggott reporting a fall of 5.7 inches on the 10th and 11th. Snow also occurred in the northwestern portion of the State on the 28th but it melted rapidly. Monthly totals of snowfall ranged from a trace at Fulton to 6.3 inches at Lutherville, the average for the State for the 91 stations being 2.4 inches. The greatest amount of rainfall measured in any 24-hour period was 3.42 inches at Yancopin on the 20th.

Peaches, pears, and plums were severely damaged in all but the extreme northern portion of the State by the severe cold wave of the 7th-8th. The large peach orchards in west-central and southwestern sections of the State reported a large portion of fruit buds killed. The snow cover was favorable for wheat, oats, and other winter crops but early truck crops were badly damaged. Some plowing was done the first and latter parts of the month but the soil was too wet in most portions. The mild weather of the latter part of the month was favorable for all winter crops, and wheat, oats, and winter truck improved. Some potatoes and other spring truck were planted the latter part of the month.

T.A.M.

Corrections: January, 1933

Fulton precipitation, rainfall on 30th should be 0.02 inch, total for month 4.08 inches, departure from the normal −0.27.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

L. XXXVIII Little Rock, Ark., March, 1933 No. 3

GENERAL SUMMARY

The mean temperature for the State for March 1933 was bove normal for the first time since 1929. Temperatures were ostly below normal from the 3d to the 11th but thereafter idden changes occurred until the last week of the month hen temperatures were continuously above normal. The coldt weather of the month occurred on the 21st in central and outhern sections and on either the 4th or 10th in the northern ortion. The average temperature for the State, based on the eports of 60 stations, was 52.6° which is 0.2° above the mean r the past 43 years. Monthly means ranged from 47.6° at atesville to 58 4° at El Dorado, with negative departures notd generally in the northern half of the State and in counties long the western border. The highest temperature recorded as 91° at Rison on the 14th; the lowest, 17° at Sunset on the 1st. The greatest daily gange was 49° at Batesville on the 7th. The last killing frost occurred in most sections on the 1st.

Rainfall was light to moderate the first half of the month except in some sections of the Ozarks and in western border ounties where an inch or more fell on the 6th. Showers and hunderstorms were general over the State from the 17th to he 19th with excessive rains in many sections. Rain also occurred in most sections on the 24th or 25th and thundershowrs accompanied by excessive rain in most sections from the 9th to the 31st. In southern Arkansas considerable damage esulted from the high winds of the night of the 30th-31st, mall barns, tenant houses, and fences being blown down.

The average precipitation for the State for the 90 stations eporting was 4.87 inches which is 0.20 inch above the mean r the past 43 years. Monthly totals ranged from 1.90 inches t Fayetteville to 8.37 inches at Jonesboro, with stations in the zarks and western border counties receiving the least amounts nd those in the northeastern portion and in counties bordering on the Mississippi River the most. Light snow was reportd in northwestern counties on the 7th and snowflurries occurred at numerous stations on the 20th. The greatest 24-hour mount of rainfall was 3.71 inches at Jonesboro on the 19th.

T.A.M.

Tornadoes, etc.

Tornadoes:--Herman in southern Craighead Co. to near Osceola; 14th, p. m., from west, path about 1300 feet, 6 injured, property damage 17,000. Benton to 11 miles south of Little Rock; 18th, 3:30 p. m., rom west, path 600 feet in Benton to narrow at end, greatest destruction in Benton, one injured, property damage $15,000. Five miles south f Mt. Holly; 30th, 5 p. m., from southwest, path 1300 feet wide, 1 illed, 4 injured, property damage $2,000. Eudora; night of 30th-31st, . m., from west, path 2600 feet wide and 5 miles long, property lamage $8,000.

Killed by lightning: 18th; near Lake City, one.

Windstorms:---6th; Chicot County; considerable damage to barns nd small tenant houses. Dredgeboat on Mississippi River 5 miles east of Lake Village capsized, one man drowned, loss $75,000. March 18th, Horatio, severe windstorm approaching a tornado, property damage $1,000. On the night of 30th-31st: Alysdale, barn destroyed, contents damaged and tank blown down, loss $300; Cleveland Co., several hundred dollars damage to roofs of buildings; Crossett, several hundred dollars damage to timber; Toledo, considerable damage to barns and fences; Ouachita Co., considerable damage to oil derricks and shade trees.

Heavy Hail:--Piggott, 14th, slight damage to roofs of buildings.

Moderate Hail:--14th; Jonesboro, Manilla and Osceola, no damage; Pollard, slight damage to roofs of buildings. 31st; Helena, Osceola and Thornburg, no damage.

CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

Vol. XXXVIII Little Rock, Ark., April, 1933 No. 4

GENERAL SUMMARY

The first week of April was mild but, following the warm days of the 9th and 10th, temperatures were below normal until the 18th with departures exceeding 20° in some sections on the 15th. On the 14th and 15th the heaviest snowfall for April in the history of the State occurred in the northwestern portion, the greatest depth reported being 14 inches at Gravette. The ground was warm and much of it melted as it fell, but it was estimated that more than 24 inches fell in some sections of Washington and Benton counties. Telegraph and telephone wires were broken and several thousand dollars damage done. Fruit trees and strawberries were in bloom but little damage resulted other than that fruit trees were damaged by the weight of the wet snow. On the 26th hailstorms occurred over an area extending from Scott County on the western border southeastward to Jefferson County. The path was narrow in many places but at times 6 or 7 miles wide. Stones as large as golf balls were reported in many instances, some being larger in a few localities. A few people were injured and the damage to property was at least $100,000.

The average temperature for the State, based on the reports of 62 stations, was 61.1° which is 0.4° below the mean for the past 43 years. Monthly means ranged from 57.0° at Sunset in the Ozarks to 65.6° at Warren. The highest temperature recorded was 93° at Dardanelle on the 10th; the lowest, 28° at Mount Ida on the 12th. The greatest daily range was 52° at Calico Rock on the 7th.

The average precipitation for the State for the 92 stations reporting was 4.80 inches which is 0.13 inch below the mean for the past 43 years. Monthly totals ranged from 2.27 inches at Thornburg to 9.14 inches at Corning. The greatest 24-hour amount of rainfall was 3.42 inches at Little Rock on the 20th-21st. The average number of rainy days was 11.

Unusual Phenomena

TORNADOES:

From 4 miles south of Ash Flat to near Sitka, 10th, 2:30 p. m., from west, 2600 feet wide and 7 miles long, houses, barns, and fences destroyed, property loss $4,500.

Originating in Texas and moving northeastward, striking in Arkansas about 15 miles northwest of Texarkana, 26th, p. m., from southwest, property damage unknown.

Camp Joy (near Hot Springs), 29th, 7 p. m., from southwest, path narrow and short, property damage $3,000.

Saltillo (11 miles southeast of Conway), 29th, 10 p. m., from west, path narrow and one mile long, property damage $1,000.

WINDSTORMS:

Crossett, 10th, $200 damage to timber and small outbuildings.

From Sitka south to the Strawberry River, 10th, houses and barns damaged, loss $2,500.

Little Rock, 29th, trees and light poles blown down, plate glass broken, property damage $6,000.

KILLED BY LIGHTNING: 13th, near Rena in Crawford County, 2.

HEAVY HAIL:

Ash Flat and vicinity, 10th, severe damage to roofs of buildings in connection with windstorm.

Marshall, Newport, Tupelo, 10th, slight damage.

Mulberry, 20th, considerable damage to gardens.

On 26th:

Arkadelphia, $25,000 damage to crops, buildings, etc.

Forester, several thousand dollars damage to fruit, truck, buildings.

Northern Garland County, $6,000 damage to houses and gardens.

Hot Springs, $1,000 damage to green houses and city lights.

Montrose and vicinity, $25.00 damage in Montrose.

Pine Bluff, $28,000 damage to green houses, crops, and buildings.

Sheridan, $25,000 damage to buildings; $7,500 damage to crops.

Story, severe damage to all crops.

Waldron, $500 damage to buildings; severe damage to truck crops.

MODERATE HAIL:

Corning, 10th, slight damage; Grannis, 21st, no damage reported; Thornburg, 21st, no damage reported; Dumas, 26th, no damage.

Corrections: January, 1933

Little Rock maximum temperature on 8th should be 47°; minimum temperature 4th, 52°; 8th, 41°; 15th, 36°; mean maximum temperature 58.4°; mean minimum temperature 41.9°.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

ol. XXXVIII Little Rock, Ark., May, 1933 No. 5

GENERAL SUMMARY

Temperature and precipitation were both above normal, this being he warmest May since 1918. Rainfall was excessive in most sections uring the first half of the month with heavy rains occurring on the 4th nd 5th and from the 12th to the 15th, numerous stations reporting over .00 inches of rainfall during the latter period. All streams in the State ose very rapidly. Flood stages were reached at most points on the rkansas and at all stations on the Black, White and St. Francis rivers. few levees broke on the Arkansas and White rivers while serious breaks ccurred along the St. Francis river and thousands of acres of farm land ere inundated. In the northeastern and extreme southeastern portions f the State the high water continued until the latter part of the month, arm work being badly delayed, but in south-central, southwestern, and estern sections conditions were more favorable. Flood losses were as ollows: On the Black and White rivers, $163,530; the Arkansas, 214,465; the Ouachita, $5,750; the St. Francis, $569,162. Tornadoes ccurred during the first half of the month in which 16 people were illed, 60 injured, and property valued at $208,200 destroyed.

The average temperature for the State, based on the reports of 62 stations, was 71.8° which is 2.7° above the mean for the past 43 years, all tations except one having positive departures. Monthly means ranged rom 66.6° at Sunset to 75.9° at El Dorado. The highest temperature ecorded was 96° at Hope on the 19th and 20th and at Dumas on the 3d; the lowest, 41°, at Grannis on the 2d and at two other stations later n the month. The greatest daily range was 46° at Mount Ida on the 8th.

The average precipitation for the State for the 91 stations reporting as 6.27 inches which is 1.24 inches above the mean for the past 43 ears. Monthly totals ranged from 2.30 inches at Carthage to 12.40 nches at Sunset. The greatest 24-hour amount of rainfall was 5.32 nches at Helena on the 12th.

Unusual Phenomena

TORNADOES:

Calhoun (6 miles southeast of Magnolia), 1st, 4 p.m., from sw, path 200 ft. wide, 6 killed, 2 injured, property damage $5,000.

Lake Village, 1st, about midnight, from sw, 3 killed, 12 injured, property damage $50,000.

From 4 miles northwest of Salem northeastward to the Missouri line, 1st, 1:30 p. m., from sw, path 2600 feet wide; another one-half mile east of Salem northeastward to the Missouri line, 1st, 2:30 p. m., from sw, 600 feet wide, in both tornadoes 3 killed, 17 injured, damage $30,000.

Calico Rock, 4th, in afternoon, from sw, path narrow and about 6 miles long, property damage $500.

Eudora, 4th, 4 p. m., from w, a wide path 3 miles long, property damage $50,000.

From near Floyd northeastward to Bald Knob, 7th, 3 p. m., from sw, path narrow, $1,000 damage to trees, buildings, etc.

From 8 miles north of Harrisburg to Truman, 7th, 4 p. m., from w, 1300 feet wide, 3 injured, property damage $25,000.

Near Cedarville, 12th, 11 p. m., from sw, path narrow, damage $500.

Winslow, 12th, 11:30 p. m., from sw, 200 feet wide, damage $200.

Bentonville, 13th, 4 a. m., from nw, 1000 feet wide and five miles long, property damage $6,000.

Franklin, 13th, 7:30 p. m., from sw, 1000 feet wide and 3 miles long, 2 killed, 12 injured, property damage $30,000.

Pocahontas, 13th, 9:10 p. m., from sw, 1300 feet wide, 2 killed, 14 injured, property damage $10,000.

Taylor, 20th, 4 p. m., from sw, path very narrow, passed through wooded sections, considerable damage to timber.

WINDSTORMS:

Magazine, 4th, considerable damage to roofs of buildings.

Harrison, 13th, trees and electric wires blown down, considerable property damage.

Mountain Home, 13th, considerable damage to trees, fences, and buildings.

KILLED BY LIGHTNING:---Near Sherill, 4th, one.

HEAVY HAIL:

Prescott, 1st, considerable damage to truck crops.

Calico Rock, 4th, considerable damage to gardens and truck crops.

Bald Knob, 7th, considerable damage to roofs of buildings and crops.

Southern Craighead and northern Poinsett counties, 7th, considerable damage to buildings, fruit trees, and crops in connection with windstorms.

Floyd, 7th, severe damage to fruit trees and truck crops.

Harrisburg, 7th, considerable damage to window glass and auto tops.

Judsonia, 7th, $2,000 damage to strawberries.

Searcy, 7th, considerable damage to truck crops and strawberries.

MODERATE HAIL:---Jonesboro, 7th, slight damage to crops. Helena, 11th and 15th, no damage. Lead Hill, 28th, no damage.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

Vol. XXXVIII Little Rock, Ark., June, 1933 No. 6

GENERAL SUMMARY

This was the third driest June during the past 43 years, June 1930 with a State average of only 0.87 inch being the driest and June 1914 with an average of 1.00 being next. Rainfall was lightest in northwestern border counties where two stations reported no rain during the month and several other amounts of less than 0.25 inch. Showers occurred on an average of only 3 days. From the 10th to the 12th, a number of stations had an inch or more of rain and several over an inch about the 27th but the distribution was irregular and the rainfall generally local. The average precipitation for the State for the 93 stations reporting was 1.30 inches which is 2.71 inches below the mean for the past 43 years. All stations with records of 10 years or more had negative departures. Monthly amounts ranged from none at Cotter and Mountain Home to 3.61 inches at Freeman Springs. Only 6 stations had monthly amounts of over 3.00 inches while 12 had less than 0.25 inch and 34 others less than 1.00 inch . The greatest amount measured in any 24-hour period was 3.43 inches at Brinkley on the 13th.

Temperatures were generally above normal from the 3d to the 11th and again from the 19th to the close of the month, while they were below normal in all sections from the 13th to the 17th. The average temperature for the State, based on the reports of 63 stations, was 78.4° which is 1.4° above the mean for the past 43 years. Of the stations for which normals have been computed, eight, located mostly in the southern half of the State, had negative departures, all others positive. Monthly means ranged from 73.0° at Dutton to 82.5° at Highland. The highest temperature recorded was 107° at Subiaco on the 23d and at both Booneville and Subiaco on the 25th; the lowest, 40° at Dutton on the 13th and at Thornburg on the 14th.

The weather during the first half of June was favorable for cotton in all sections. The crop is late but in the lowlands it has grown under conditions which were mostly favorable. In most portions of the uplands the soil was too dry the latter part of the month for good growth. The high temperatures and the light rainfall during the latter part of the month were unfavorable for most crops. Early corn has been badly damaged except in localities where heavy showers occurred. In some sections the early crop is a failure and in most portions poor. The soil was too dry in the northwestern portion of the State for resetting tomato plants and the commercial crop was badly damaged. Meadows, pastures, fruit, and truck crops were needing rain badly by the close of the month in most sections.

Unusual Phenomena

Tornado:---Near Mena, 25th, 3 p. m., from west, path narrow, property damage $500.

Windstorms:---Arkadelphia, 23d, $2,000 damage to barns, houses, and timber. Hope, 24th, considerable damage to buildings. Arkadelphia, 26th, $2,000 damage to buildings and contents. Greenbrier, 26th, considerable damage to houses, barns, and timber.

Heavy Hail:---Arkadelphia, 26th, $2,000 damage to crops.

Moderate Hail:---On 12th, Arlberg, Center Point, and Hope, no damage.

Killed by Lightning:---Near Marianna, 12th, one; near McNab, 26th, one.

AUG 1933

Correction: May, 1933

Mean temperature for Bee Branch should be 71.7°; departure from normal +3.4°.

H. S. COLE, Meteorologist

Vol. XXXVIII LITTLE ROCK, ARK., JULY, 1933 No. 7

GENERAL SUMMARY

Temperatures were continuously above normal in the western portion of the State the first half of the month with maximum temperatures of 100° or higher occurring on an average of about seven days, while departures were not so marked in central and eastern portions. The average temperature for the State, based on the reports of 63 stations, was 81.4° which is 1.1° above the mean for the past 43 years. Of the stations for which normals have been computed, eleven located mostly in the eastern half of the State had negative departures. Monthly means ranged 76.9° at Dutton to 84.9 at Subiaco. The highest temperature recorded was 109° at Booneville on the 10th and at Grannis on the 11th; the lowest, 55° at Dutton on the 16th. The greatest daily range was 41 at Dutton and Thornburg on the 14th.

Several stations reported heavy showers on either the 3d or 4th, the 9th or 10th, and from the 16th to the 19th, but the rainfall was generally local with the western portion of the State receiving the least amount. Rain was general over the State from the 23d to the 30th in connection with the tropical disturbance which moved across northern Louisiana. It began in the southern portion on the 22d and rained most of the time for four days and in some sections even longer. Amounts were excessive in southern and eastern sections with considerable damage to crops, but in the western portion and in the upper Ouachita and upper White valleys daily amounts were generally light to moderate. The average precipitation for the State for the 88 stations reporting was 5.01 inches which is 1.15 inches above the mean for the past 43 years. Monthly amounts ranged from 1.16 inches at Ozark to 12.89 inches at Crossett. El Dorado in Union County had 12.09 inches and six other stations over 9.00 inches. Rainfall was heaviest in southern border counties and in the lower portion of the Arkansas and White river valleys, while it was lightest in the west-central portion and in some sections of the Ozarks. The greatest 24-hour amount was 7.13 inches at Crossett on the 26th. The average number of days with 0.01 inch or more precipitation was 9 though a number of stations reported as many as eleven and one other seventeen rainy days.

The high temperatures and the light rainfall the first half of the month were unfavorable for all crops except cotton. Early corn, meadows, pastures, tomatoes, and other minor crops were seriously damaged except in a few localities where heavy showers occurred. However, conditions were much more favorable the latter part of the month except that there was too much rain in southern and eastern portions. Cotton was injured by the excessive rain in some localities but late corn, pastures, and other crops were greatly benefited. The soil at the close of the month was in good condition for fall planting except in some northwestern counties where more rain was needed.

H. S. COLE

Vol. XXXVIII Little Rock, Ark., August, 1933 No. 8

GENERAL SUMMARY

Maximum temperatures during August, 1933 were below the average in nearly all portions, while minimum temperatures were generally somewhat above the normal. Only three stations reported temperatures as high as 101° and four others 100°. The average temperature for the State, based on the reports of 62 stations, was 79.1° which is 0.6° below the mean for the past 43 years. Of the stations for which normals have been computed, only 10 had positive departures. Monthly means ranged from 73.2° at Dutton in the Ozarks to 83.2° at Center Point in the southwestern portion. The highest temperature recorded was 101° at Amity, Booneville, and Ozark on the 10th which is the lowest maximum temperature for the State since 1906, while the lowest for the month was 49° at Dutton on the 16th.

Showers occurred on an average of 8 days during the month though several stations had as many as 11 and one reported 15 rainy days. Rainfall was heavy to excessive on the 3d and 4th, from the 11th to the 13th, and on the 17th, 28th, and 29th, but the distribution was irregular. In Ashley County, Crossett in the western portion had only 1.04 inches while Portland in the eastern portion had 4.56 inches, 3.50 inches of which fell in two hours on the 29th. One other station had about 1.00 inch while 6 had over 7.00 inches. The average precipitation for the State for the 87 stations reporting was 4.42 inches which is 0.72 inch above the mean for the past 43 years. Of the stations with records of 10 years or more, 41 had positive departures and 28 negative. Monthly totals ranged from 1.01 inches at Warren to 7.88 inches at Freeman Springs. The greatest amount measured in any 24 hours was 4.12 inches at Booneville on the 12th.

The weather was generally favorable for cotton the first 10 days of the month but thereafter the heavy to excessive rainfall caused rank growth, considerable shedding, and complaints of boll weevil damage in many sections. Cotton began opening in southern and central portions by the middle of the month and a few bales were ginned about the 17th or 18th. The rains came too late to benefit early corn but late corn has grown under conditions which were mostly favorable. The weather was favorable for pastures, meadows, rice, and minor crops in nearly all sections.

T. A. M.

Windstorms

Crossett, 12th, one killed and one injured when tree fell across wagon.

Helena, 12th, considerable damage to plate glass windows, trees, and awnings during heavy rainstorm.

Little Rock, 12th, several trees blown down and minor damage from lightning during heavy rainstorm.

Killed and Injured by Lightning

Helena, 12th, one killed.
Roberts Town, 14th, one killed, two injured.
Near Stamps, 27th, one killed, one slightly injured.
Near Elaine, 29th, one killed, four injured.

Moderate Hail

Helena, 12th, slight damage to gardens and shrubbery.

Correction: July, 1933

Mena, highest temperature should be 104° on the 11th.

Vol. XXXVIII Little Rock, Ark., September, 1933 No. 9

GENERAL SUMMARY

This was the warmest and wettest September since September 1925. Although maximum temperatures were not unseasonably high, mean temperatures were below the normal for only one or two days during the entire month with departures of 10° or more occurring from the 17th to the 19th and during the last week of the month. The average temperature for the State, based on the reports of 62 stations, was 78.5° which is 4.1° above the mean for the past 43 years. All stations for which normals have been computed had positive departures. Monthly means ranged from 72.0° at Dutton to 82.0° at Highland. The highest temperature recorded was 102° at Hope on the 18th; the lowest, 41° at Dutton on the 21st. The greatest daily range was 47° at Hope on the 21st and at Dumas on the 22d.

Rainfall was heavy to excessive in most of the northern half of the State during the first four days of the month and at several stations in the northern portion of the southern half, more than half of the monthly total for a number of stations occurring during this four-day period. Showers with heavy local rains occurred about the middle of the month and rainfall was general over the State from the 24th to the 29th. Heavy to excessive rains occurred during the latter period, Georgetown reporting 4.50 inches and Gravette 4.20 inches on the 29th. The average precipitation for the State for the 87 stations reporting was 5.10 inches which is 1.77 inches above the mean for the past 43 years. Of the stations with records of 10 years or more, 23 had negative departures and 46 positive. Monthly totals ranged from 0.17 inch at Magnolia to 14.92 inches at Grannis with stations in the northwestern portion receiving the heaviest rainfall and those in southern border counties and south-central sections the least. The greatest amount measured in any 24-hour period was 8.92 inches at Grannis on the 12th. The average number of rainy days was 8.

The cloudy, rainy weather the first and last of the month was unfavorable for cotton but otherwise the weather was generally favorable except in localities where heavy to excessive rains occurred about the middle of the month. In sections where rainfall was heaviest considerable damage was done and numerous complaints were received of rank growth, shedding, and boll weevil activity. Army worms appeared the latter part of the month but the crop was far enough advanced to prevent serious damage. Late corn, rice, meadows, and minor crops grew under conditions mostly favorable except in localities where rainfall was heaviest and in some southern sections where the soil was too dry. Flood stage was reached at Fort Smith on the 5th and a loss of $3,600 was reported, very little damage occurring elsewhere.

T.A.M

Damage from Windstorm

Bentonville, 26th, considerable damage to roofs of buildings, porches, and small buildings.

Damage from Lightning

Near Bentonville, 26th, barn and contents destroyed, loss $1,500.

Near Eureka Springs, 26th, general store and contents destroyed, loss $5,000.

Killed and Injured by Lightning

Cabot, 1st, 3 killed, 8 injured during electrical storm.

ol. XXXVIII Little Rock, Ark., October, 1933 No. 10

GENERAL SUMMARY

Temperatures during October, 1933, averaged slightly above ormal, while precipitation was generally deficient except in he northwestern portion. The coldest weather of the month ccurred either the 8th or 9th or on the 25th or 26th, a few tations reporting freezing temperatures on these dates, while he highest temperatures occurred generally either on the 1st, 1th, 20th, or 21st, or during the last three days of the month vhen departures were from 10° to 15° above normal. The verage temperature for the State, based on the reports of 62 tations, was 62.6° which is 0.1° above the mean for the past 3 years. Of the stations with records of 10 years or more, 27 ad positive departures, 25 negative, and one normal. The ighest temperature recorded was 90° at Center Point on the st and at two other stations on later dates; the lowest, 30° at Dutton on the 8th. The greatest daily range was 48° at Calico Rock on the 11th.

Scattered showers occurred during the first ten days of the month and more general rains from the 12th to the 16th and rom the 19th to the 23d and showers on either the 26th or 27th. The average precipitation for the State for the 88 stations reporting was 2.83 inches which is 0.32 inch below the mean for the past 43 years. Of the stations with records of 10 years or more, only 16 had positive departures. The northwestern portion of the State received the heaviest rainfall while the greatest deficiency was in eastern, north-central, and south-central sections, with monthly totals ranging from 0.58 inch at Higden to 7.73 inches at Dutton. The average number of days with 0.01 inch or more was 5 though a number of stations had only two or three rainy days. The greatest amount measured in any 24-hour period was 4.33 inches at Texarkana on the 16th.

The weather during October was very favorable for all outdoor activities and the growth of nearly all crops. Cotton picking progressed rapidly and was almost completed by the close of the month except in the northeastern portion. Light frost occurred at a number of stations and heavy frost and freezing temperatures in some sections but practically no damage was done to growing vegetation. Late corn, beans, tomatoes, and other truck crops grew under favorable conditions except in some sections where rainfall was lightest and the soil too dry. Rice harvest was completed and threshing well along by the close of the month and the yield was above the average. Streams in all sections were at low stages most of the month.

T.A.M.

Damage by Lightning

Lutherville, 26th, barn and contents destroyed, loss $1,000.

Corrections: September, 1933

Ozark, maximum temperature on 30th should be 92°, mean maximum 89.0°, mean temperature 78.0°, departure from the normal +2.2°. Thornburg, minimum temperature on 30th should be 78°.

ARKANSAS SECTION

H. S. COLE

ol. XXXVIII Little Rock, Ark., November, 1933 No. 11

GENERAL SUMMARY

Temperatures were considerably below normal from the 4th o the 11th of November and on the 15th and 16th, and slighty below in most sections from the 23d to the 25th, while they vere above normal nearly all of the remainder of the time. he coldest for the month occurred either on the 8th, 10th, or 6th, while the warmest weather was reported either the 1st or d, the 20th, or during the latter part of the month. The verage temperature for the State, based on the reports of 62 tations, was 53.0° which is 1.5° above the mean for the past 3 years. Of the stations for which normals have been comouted, only four had negative departures. Monthly means anged from 47.6° at Dutton to 58.0° at El Dorado. The highst temperature reported was 85° at Conway on the 20th; the owest, 20° at Dutton on the 8th and at both Dutton and Vynne on the 10th and 16th. The greatest daily range was 4° at Calico Rock on the 20th.

Precipitation for the month was confined principally to three eriods. Moderate to locally heavy rains occurred from the 2d o the 5th and again on either the 20th or 21st, and light showers about the 24th, fair weather prevailing in most sections the emainder of the time. The average precipitation for the State or the 89 stations reporting was 1.88 inches which is 1.75 nches below the mean for the past 43 years. Of the stations vith records of 10 years or more, only three, Amity, Danville, nd Malvern, had positive departures. Monthly totals ranged rom 0.50 inch at Crossett to 4.91 inches at Malvern. Five stations had monthly totals of less than 1.00 inch while only hree had more than 4.00 inches. The greatest amount measured in any 24-hour period was 3.85 inches at Malvern on the 1st. The average number of days with 0.01 inch or more vas 4.

Favorable weather conditions continued during November. The gathering of fall crops was farther advanced than usual luring October and this work was nearly completed by November 30th, only a small amount of cotton remaining in the fields n the northeastern portion of the State by the last of the month. The rains during the first week were very beneficial o fall crops. Beans, cabbage, turnips, tomatoes, and other all truck were plentiful until the freezing temperatures of the th when considerable damage resulted. Some late corn was njured by the killing frost but most staple crops had already natured. All streams of the State remained at low stages luring the month though the rains were generally sufficient or soil moisture except in some southern counties where it was oo dry. More than the usual amount of fall plowing had been lone by the close of the month.

T.A.M.

Moderate Hail:--Grannis, 20th, some damage to fall truck. Portland and Yancopin, 21st, no damage.
Heavy Hail;--Prescott, 20th, no report on damage.

Correction: September, 1933

Fort Smith, greatest 24-hour precipitation should be 4.03 inches.

ARKANSAS SECTION

JUN 28 1934

H. S. COLE

ol. XXXVIII Little Rock, Ark., December, 1933 No. 12

GENERAL SUMMARY

Although maximum temperatures during December 1933 were not unusually high, the mean temperature for the State was the highest on record surpassing the correspondingly warm months of 1923 and 1931 by 0.2° and 0.6°, respectively. Temperatures were from 10° to 20° above normal the first five days of the month and again from the 14th to the 18th and were from 10° to 15° above normal from the 22d to the 24th and on the 31st, while they were considerably below normal from the 26th to the 28th, when the coldest weather of the month occurred in most sections. The average temperature for the State, based on the reports of 62 stations, was 49.3° which is 6.5° above the mean for the past 43 years. all stations for which normals have been computed having positive departures. Monthly means ranged from 42.9° at Dutton to 56.8° El Dorado with two stations in the extreme southern part of the State having departures of 10° above normal. The highest temperature recorded was 83° at Camden on the 5th; the lowest, 11°, at Osceola on the 27th. The greatest daily range was 50° at Lead Hill on the 4th.

Rainfall was moderate to heavy on either the 2d or 3d and on the 5th or 6th and excessive in many sections from the 15th to the 19th, some stations in southeastern and east-central portions receiving over 8.00 inches during this latter period. After the 19th rainfall was generally light to moderate except in the southwestern portion where over an inch occurred at a few stations on the 30th or 31st. Four stations in the northwestern portion of the State reported a measurable amount of snow, the greatest depth being 2.5 inches at Rogers and Bentonville, while the average depth for the State was only 0.1 inch. The average precipitation for the State for the 90 stations reporting was 5.41 inches which is 1.11 inches above the mean for the past 43 years. Monthly totals ranged from 1.80 inches at Gravette to 12.01 inches at Clarendon. Eight stations had monthly amounts of over 10.00 inches while four stations in the extreme northwestern portion had less than 2.00 inches. The greatest amount measured in any 24-hour period was 4.80 inches at Rison on the 18th. The average number of days with 0.01 inch or more rainfall was 7 while 11 stations had ten or more rainy days. No flood stages were recorded.

The warm weather of the month was favorable for out-door activities except from the 15th to the 19th when heavy to excessive rains occurred in eastern and southern portions. Considerable plowing has been done and oats, wheat, pastures, and other winter crops have grown under favorable conditions. The freezing temperatures of the 7th and 8th brought killing frost to extreme southern portions of the State for the first time this fall. The weather was too warm for fruit. T.A.M.

Tornado:--Three miles east of Crossett, 5th, 6:30 p.m., from sw, path 300 to 1200 feet wide and 6 miles long, 5 people injured, one seriously, property damage $8,000.

Damage from Lightning:--Texarkana, 2d, $1,000 damage to courthouse during heavy rain.

Heavy Hail:--Okay, 5th, no damage; Carthage, 6th, no damage; Grannis, 19th, slight damage to winter truck crops.

ARKANSAS SECTION

JUN 28 1934

H. S. COLE

Vol. XXXVIII Little Rock, Ark., Year, 1933 No. 13

GENERAL SUMMARY

The outstanding features of the weather in Arkansas during the year 1933 were the warm months of January and December, the cold weather of February, the severe hailstorms in April, and the excessive rain in some sections of the State in July and December. January was the warmest January since 1907 and December the warmest on record. February was the coldest February since 1929 but the low of 13° below zero did not approach the record of 29° below established in 1905. In March temperatures averaged slightly above normal, while in April they were somewhat below. From May to July temperatures were warmer than usual but extremes were well within the limits established in previous years. A comparatively cool August was followed by a warm September but thereafter temperatures were not unusually high until in December. The average temperature for the State for the year was 63.2° which is 1.9° above the mean for the past 43 years. Annual means ranged from 59.3° at Marshall in the Ozarks to 66.9° at Magnolia in a southern border county. Of the 52 stations for which normals have been computed, only one, Marshall, had a negative departure. Extremes ranged from 13° below zero at Sunset on February 8th and at Lead Hill on February 11th to 109° at Booneville on July 10th and at Grannis on July 11th.

The average precipitation for the State was 49.08 inches which is 0.79 inch above the mean for the past 43 years. Of the 69 stations with records of 10 years or more, 38 had negative departures and 31 positive. Annual amounts ranged from 38.24 inches at Cotter to 64.71 inches at Yancopin, with stations in the southwestern portion and along the eastern slope of the Ozarks receiving the least rainfall and those in extreme northwestern, northeastern, and east-central portions the most. Precipitation was below normal in January, April, June, October, and November, above in other months, with the least rainfall occurring in June and November. Rainfall during the growing season from April to September, inclusive, was somewhat below normal but in June amounts were seriously deficient in many sections, causing rapid deterioration of nearly all crops. Though rainfall was above the average in July some sections during the first part of the month suffered from lack of moisture.

The last killing frost in spring occurred March 21st except at a few stations in northern and western portions where it was reported as late as March 26th and at Story as late as April 7th. The first killing frost in autumn occurred November 8th except in the extreme southern portion where a few stations had no killing frost until December 7th and one station none until December 27th. The growing season ranged from 215 days at Story in the Ouachita Mountains to 281 days at El Dorado in the extreme southern portion. In most sections the growing season was 232 days as the first and last killing frosts occurred about the same time in all sections of the State which is unusual. Killing frost in spring did little damage but the freeze in February killed the majority of peach, plum, and pear buds except in the northern portion of the State. In the fall truck crops were damaged but staple crops had matured.

Tornadoes and windstorms occurred during the spring and summer months and in December but they were most severe in March and May. In May 13 separate tornadoes were reported. During the year 17 people were killed, 76 injured, and property valued at $270,200 was destroyed. The damage from windstorms was estimated at $92,000, the most of which occurred in March. Hailstorms were unusually severe in April, the loss in that month alone being about $100,000. The total damage for the year was $104,600. The loss from floods in May was estimated at $952,907, 60% of which occurred in the St. Francis River basin.

T.A.M.

WEATHER BY MONTHS

January:—This was the warmest January since 1907 and the second warmest on record. Daily departures were from 10° to over 25° above normal from the 16th to the 26th, while the coldest weather occurred either the 1st or 12th. The average temperature for the 61 stations was 48.8° which is 7.5° above the mean for the past 43 years, while precipitation was 0.61 inch below the average, with monthly totals ranging from 1.65 inches at Mountain Home to 7.33 inches at Blytheville. The warm weather caused fruit buds to develop in central and southern sections but growth was checked somewhat by the cooler weather the last few days of the month.

February:—A severe cold wave overspread the State on the 7th and 8th bringing temperatures as low as zero nearly to the southern border in the southwestern portion and as low as 13° below zero in the Ozarks. Peaches, pears, and plums were severely damaged in all but the extreme northern portion of the State but the snow cover was favorable for wheat, oats and other winter crops. However, early truck crops were severely damaged. Rainfall was generally below normal in the northern half of the State and decidedly above normal in southern border counties and in most of the southeastern portion.

March:—Temperature was 0.2° above the average and precipitation 0.20 inch above. Monthly totals ranged from 1.90 inches at Fayetteville to 8.37 inches at Jonesboro, with stations in the Ozarks and western border counties receiving the least amounts and those in the northeastern portion and in counties bordering on the Mississippi River the most. In southern Arkansas considerable damage resulted from the high winds of the night of the 30th-31st, small barns, tenant houses, and fences being blown down. The last killing frost occurred in most sections on the 21st. Tornadoes occurred on the 14th, 18th, and 30th in which one person was killed, 11 injured, and property valued at $42,000 destroyed.

April:—The first week of the month was mild but, following the warm days of the 9th and 10th, temperatures were below normal until the 18th. On the 14th and 15th the heaviest snowfall for April in the history of the State occurred in the northwestern portion, the greatest depth reported being 14 inches at Gravette. The ground was warm and much of it melted as it fell but it was estimated that more than 24 inches fell in some sections of Washington and Benton counties. Fruit trees and strawberries were in bloom but little damage resulted other than that fruit trees were broken by the weight of the wet snow. On the 26th hailstorms occurred over an area extending from Scott County on the western border southeastward to Jefferson County. The path was narrow in many places but at times was 6 or 7 miles wide. Stones as large as golf balls were reported in many instances. A few people were injured and the damage to property was at least $100,000. The average number of rainy days was 11 with monthly totals of precipitation ranging from 2.27 inches at Thornburg to 9.14 inches at Corning.

May:—Temperature and precipitation were both above normal, this being the warmest May since 1918. Rainfall was excessive in most sections during the first half of the month, numerous stations reporting over 5.00 inches from the 12th to the 15th. Flood stages were reached at most points on the

Arkansas River and at all stations on the Black, White, and St. Francis rivers. A few levees broke on the Arkansas and White rivers while serious breaks occurred along the St. Francis river and thousands of acres of farm land were inundated. Flood losses were as follows: On the Black and White rivers, $163,530; the Arkansas $214,465; the Ouachita $5,750; the St. Francis $569,162. Tornadoes occurred in 13 communities during the first half of the month in which 16 people were killed, 60 injured, and property valued at $208,200 was destroyed. High winds were reported at Magazine, Harrison, and Mountain Home. Moderate to heavy hail was reported in many sections.

June:—This was the third driest June in the past 43 years. Rainfall was lightest in northwestern border counties where two stations reported no rain. Only 6 stations had monthly totals of over 3.00 inches while 12 had less than 0.25 inch and 34 others less than 1.00 inch. The weather during the first half of the month was favorable for cotton in all sections. In most portions of the uplands the soil was too dry the latter part for good growth but in the lowlands conditions were mostly favorable. The high temperatures and the light rainfall during the latter part of the month were unfavorable for most other crops. Early corn was badly damaged except in localities where heavy showers occurred. In some sections the early crop was a failure and in most portions poor. The soil was too dry in the northwestern portion of the State for resetting tomato plants and the commercial crop was badly damaged. Meadows, pastures, fruit, and truck crops were needing rain badly by the close of the month in most sections.

July:—Temperatures were continuously above normal in the western portion of the State the first half of the month while departures were not so marked in central and eastern portions. Rain began in the southern portion of the State on the 22d and continued for four days and in some sections even longer. Amounts were excessive in southern and eastern sections but in the upper Ouachita and upper White river valleys daily amounts were generally light to moderate. The greatest 24-hour amount was 7.13 inches at Crossett on the 26th. The high temperatures and the light rainfall the first half of the month were unfavorable for all crops except cotton. Early corn, meadows, pastures, tomatoes, and other minor crops were severely damaged except in a few localities where heavy showers occurred. Conditions were much more favorable the latter part of the month except that cotton was injured in southern and eastern sections by the excessive rains. The soil was in good condition at the close of the month for fall planting except that more rain was needed in some northwestern counties.

August:—Maximum temperatures were below the average in nearly all portions with only three stations reporting temperatures as high as 101° and four others 100°. Rainfall was heavy to excessive on the 3d and 4th, from the 11th to the 13th, and on the 17th, 28th and 29th, but the distribution was irregular. Monthly totals ranged from 1.01 inches at Warren to 7.88 inches at Freeman Springs. The weather was generally favorable for cotton the first 10 days of the month but thereafter the heavy to excessive rainfall caused rank growth, considerable shedding, and complaints of boll weevil damage in many localities. Cotton began opening in southern and central portions by the middle of the month and a few bales were ginned about the 17th or 18th. The rains came too late to benefit early corn but they were very beneficial to late corn and all other crops.

September:—This was the warmest and wettest September since 1925. Although maximum temperatures were not unseasonably high, mean temperatures were below normal for only one or two days during the entire month. Rainfall was heavy to excessive the first four days of the month in the northern half of the State and in some other sections, more than half of the monthly total for a number of stations occurring during this four-day period. Monthly amounts ranged from 0.17 inch at Magnolia to 14.92 inches at Grannis. The greatest amount measured in any 24-hour period was 8.92 inches at Grannis on the 12th. The cloudy, rainy weather the first and last of the month was unfavorable for cotton and in sections where rainfall was heaviest considerable damage was done and numerous complaints were received of rank growth, shedding, and boll weevil activity. Army worms appeared the latter part of the month but the crop was far enough advanced to prevent serious damage.

October:—Temperatures averaged slightly above normal, while precipitation was generally deficient except in the northwestern portion, monthly totals ranging from 0.58 inch at Higden to 7.73 inches at Dutton. The weather was very favorable for all out-door activities and the growth of nearly all crops. Cotton picking progressed rapidly and was almost completed by the close of the month except in the northeastern portion. Light frost occurred at a number of stations and heavy frost and freezing temperatures in some sections but practically no damage was done to growing vegetation. Streams in all sections were at low stages most of the month.

November:—Precipitation was 1.75 inches below the average with only three stations having monthly totals of over 4.00 inches, while five had less than 1.00 inch. Favorable weather conditions continued during the month. The gathering of fall crops was farther advanced than usual during October and this work was nearly completed by the close of November. Killing frost occurred in nearly all portions on the 8th, truck crops and some late corn being damaged. More than the usual amount of fall plowing had been done by the close of the month, but the soil was too dry in some southern counties.

December:—This was the warmest December on record. Rainfall was excessive in many sections from the 15th to the 19th, some stations in southeastern and east-central portions receiving over 8.00 inches. Monthly totals ranged from 1.80 inches at Gravette to 12.01 inches at Clarendon. Eight stations had amounts over 10.00 inches while four in the extreme northwestern portion had monthly totals of less than 2.00 inches. The freezing temperatures of the 7th and 8th brought killing frost to extreme southern portions of the State for the first time this fall. Conditions were favorable for the growth of wheat, oats, pastures, and other winter crops.

The departures from normal temperature and precipitation are computed only for stations having ten or more years record, but all complete reports are used in determining section means. T., less than 0.01 inch rain or melted snow. Reference letters ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing: for example ^{b} represents two days missing. † Also on later dates. ‡‡ Post-office addresses of these stations as follows:-Big Lake Outlet, Manilla, Ark., Freeman Springs, Dover, Ark., Index, Route 5, Texarkana, Ark., Lutherville, R. F. D. No. 1, Lamar, Ark. Springbank, Doddridge, Ark. *40 days missing.

Monthly and Annual Mean Temperatures for the Year 1933, with Departures from the Normal

Corrections: year 1933

November: Batesville, number of clear days should be 21, cloudy 6; annual, clear days 192, cloudy 123.

December: Hot Springs mean temperature should be 48.8°; departure from normal +4.8°; Marianna lowest temperature should be 17° on the 27th.

The following corrections should be made in the respective months: Center Point, total precipitation for March 4.17 inches. Departures from normal precipitation; January, Thornburg −0.57 inch; February, Fayetteville +1.24 inches; Fulton +0.68 inch; Little Rock −1.18 inches; Wynne −0.98 inch; April, Rogers +1.14 inches. Temperature departures: January, Ft. Smith +8.9°; October, Rison +1.8°.

W.B.O., Little Rock, Ark. 2-14-34-1300.

Vol. XXXIX Little Rock, Ark., January, 1934 No. 1

GENERAL SUMMARY

Though the mean temperature for January 1934 was considerably above normal, it was not near so high as that of January 1933, which was the second warmest on record. Temperatures averaged somewhat below normal in the western portion of the State and near normal to somewhat above in central and eastern sections during the first ten days of the month but from the 12th to the 28th they were continuously above normal with departures ranging from 10° to more than 15° above for seven days during this period. A cold wave with temperatures ranging from 2° in the northwestern portion to 20° in southern border counties overspread the State on the 29th bringing the coldest weather of the month to nearly all sections. The average temperature for the State, based on the reports of 62 stations, was 44.5° which is 3.1° above the mean for the past 44 years, all stations for which normals have been computed having positive departures. Monthly means ranged from 39.3° at Dutton in the Ozarks to 49.7° at El Dorado in a southern border county. The highest temperature recorded was 78° at Highland on the 28th; the lowest, 2°, at both Dutton and Lead Hill on the 30th. The greatest daily range was 47° at Calico Rock on the 15th.

The average precipitation for the State for the 89 stations reporting was 2.85 inches which is 1.40 inches below the mean for the past 44 years, only 6 stations with records of 10 years or more having positive departures. Monthly amounts ranged from 1.39 inches at Mammoth Spring to 5.50 inches at Crossett with stations in the northern half of the State receiving the least amount of rainfall. The greatest amount measured in any 24-hour period was 2.60 inches at Malvern on the 4th. Snow occurred in many sections on either the 7th or 8th but only five stations in the northwestern portion had measurable amounts, the greatest depth reported being 3.0 inches at Eureka Springs. In other sections the fall was light and it generally melted as it fell. The average amount for the State for the 89 stations was 0.1 inch. Light sleet was reported at a few stations on the 29th and 31st and glaze at three stations on the 31st. The average number of rainy days was 8 which is one more than the average. Nearly all of the streams of the State were at low stages during the month.

The cloudy, rainy weather the first part of the month was unfavorable for out-door work but thereafter until the last three days of the month conditions were very favorable. Wheat, oats, and other winter crops were in good to excellent condition at the close of the month except in some sections where they were frozen down by the cold wave of the 29th-30th. Much more than the usual amount of plowing has been done. The weather was too warm for fruit, causing some apprehension in central and southern sections.

T.A.M.

CORRECTIONS:

Ft. Smith, December minimum temperature on the 16th should be 41°; mean minimum temperature 38.8°.

ARKANSAS SECTION

JUN 28 1934

H. S. COLE

Vol. XXXIX Little Rock, Ark., February, 1934 No. 2

GENERAL SUMMARY

Except for a brief period from the 9th to the 11th, temperatures were generally above normal until the 17th, but thereafter they were continuously below normal for the remainder of the month with departures ranging from 10° to more than 25° below normal from the 24th to the 28th. Highest temperatures occurred on either the 2d, 14th, or 15th, while the lowest in most sections occurred either the 26th or 27th when a cold wave overspread the entire State bringing temperatures as low as 20° to southern border counties. The mean temperature for the State, based on the reports of 62 stations, was 41.5° which is 2.1° below the mean for the past 44 years. Of the stations for which normals have been computed, only three had positive departures. Monthly means ranged from 34.0° at Dutton in the Ozarks to 47.8° at El Dorado in a southern border county. The highest temperature recorded was 82° at Grannis on the 15th; the lowest, 3° at Lead Hill on the 27th. The greatest daily range was 56° at Calico Rock on the 14th.

While a number of stations in the southern portion of the State received more than an inch of rainfall during the first 17 days of the month, some sections in the northern portion had no rain during this time. After the 17th there was an average of four rainy days but the southern half of the State again received the heaviest rainfall. A few stations reported snow flurries and a little sleet either the 9th or 10th and nearly all stations some snow from the 24th to the 28th, the average for the month for the 90 stations being 0.5 inch. The greatest depth reported was 2.0 inches at Bee Branch, Eureka Springs, and Mount Ida on the 28th. Glaze formed in some sections on the 9th and 10th and in northern and central sections of the State on the 24th and 25th. In some northern border counties considerable damage was done to telephone, telegraph, and power lines and to fruit trees and shrubbery. The ice and sleet coated the ground and travel was hazardous. The average precipitation for the State, based on the reports of 90 stations, was 2.00 inches which is 1.34 inches below the mean for the past 44 years. Only five of the stations with records of 10 years or more had positive departures. Monthly totals ranged from 0.37 inch at Higden to 5.76 inches at Portland, with stations in northern and central portions of the State receiving approximately 50% of the average rainfall. The greatest amount measured in any 24-hour period was 2.05 inches at Paragould on the 25th. The average number of rainy days was 6.

Except for a brief period from the 8th to the 11th, the weather was favorable for the usual out-door activities until the 17th. Much more than the usual amount of plowing was done and in southern and central sections spring oats and grass seeds were sown, and some gardens planted. Very little farm work was done the last 10 days of the month due to the cold, rainy weather and frozen ground. The cold wave of the 25th and 26th damaged early potatoes and gardens in northern and central portions.

T.A.M.

GLAZE:

24th-25th, several thousand dollars damage in northern border counties to telephone, telegraph, and power lines.

H. S. COLE

L. XXXIX LITTLE ROCK, ARK., MARCH, 1934 No. 3

GENERAL SUMMARY

Temperatures fluctuated considerably during the month of arch. Following the cold weather of the latter part of Febru-y, temperatures were above normal from the 2d to the 6th, t much colder weather overspread the State on the 9th and th, bringing temperatures as low as 10° in the Ozarks and ° in southern border counties. A cold spell of short dura-on swept over the State on the 18th and 19th while another ich lasted much longer continued from the 23d to the 27th. e average temperature for the State, based on the reports of stations, was 49.6° which is 2.7° below the mean for the st 44 years. All stations for which normals have been com-ted had negative departures, ranging from 0.1° in the west-n portion to 6.2° in the north-central portion. Monthly eans ranged from 43.6° at Dutton to 55.4° at El Dorado. e highest temperature recorded was 85° at Conway on the th; the lowest, 4° , at Dutton on the 19th.

Precipitation during the month was divided into four periods. eavy to excessive rains occurred in central and southern sec-ons the first few days of the month and in all except the ex-eme northwestern portion from the 23d to the 27th, while mounts exceeding one inch occurred in some sections on the h and 18th when rain, sleet and snow were reported. Snow so occurred in the northwestern portion on the 26th and 27th, ureka Springs reporting a depth of 4.0 inches for the two ays. The greatest depth of snow for the month reported was .5 inches at Bentonville and the average for the 88 stations as 1.0 inches. The average precipitation for the State for the 8 stations was 6.53 inches which is 1.82 inches above the ean for the past 44 years. Of the stations with records of 10 ears or more, only 9, located mostly in the northwestern por-on of the State, had negative departures. Monthly amounts anged from 2.10 inches at Bentonville to 10.29 inches at Pine luff. The greatest amount measured in any 24-hour period as 5.00 inches at Pine Bluff on the 26th.

The weather was favorable for farm work from the 10th to e 17th, unfavorable the remainder of the month. Flood tages were exceeded on the Black, White, Petit Jean, and uachita rivers the latter part of the month. Losses were as llows: On the Black and White rivers, $9,350; on the uachita river, $28,100. Considerable damage was done by xcessive rains, the damage to roads and bridges in Craighead ounty being estimated at $20,000. T.A.M.

HEAVY HAIL

Booneville, 8th; Lutherville, 8th, slight damage; Paragould, th; Okay, 18th, very little damage.

MODERATE HAIL

Jonesboro, 8th and 24th; Waldron, 8th; Paragould, 18th; tory, 18th.

Corrections: January

Fort Smith, mean monthly reduced pressure should be 30.15 inches. Pocahontas, rainfall on 4th should be 1.15 inches; total for month 2.55 inches; departure from normal −1.91 inches; greatest in 24 hours 1.15 inches on the 4th. Average precipitation for State should be 2.86 inches; departure −1.39 inches.

Corrections: February

Batesville, mean minimum temperature should be 21.6°; mean temperature 35.5°; departure from normal −5.3°. Lutherville, mean minimum temperature 30.5°. Yancopin, number of clear days 15, cloudy 12.

Vol. XXXIX Little Rock, Ark., April, 1934 No. 4

GENERAL SUMMARY

Temperatures were considerably above normal for the first five days of the month and on the 10th with departures ranging as high as 19° above normal on the 3d, while they were from 10° to 12° below normal on the 12th, 20th, and 28th. Light frost occurred in many sections on the 13th, 28th, and 29th, killing frost at Freeman Springs and Story on the 20th, and temperatures as low as 29° in the Ozarks on the 13th. Strong northwest winds brought dust from the Plains States on the 11th and 19th and from the 22d to the 26th reducing the visibility on the 11th and 24th occasionally to 2 1-2 or 3 miles. The average temperature for the State, based on the reports of 60 stations, was 62.7° which is 1.1° above the mean for the past 44 years. Of the stations with records of 10 years or more, only 10 had negative departures. The highest temperature recorded was 90° at Rison on the 2d and 4th and at Dardanelle on the 26th; the lowest, 29° at Dutton on the 13th. The greatest daily range was 48° at Lead Hill on the 29th.

Precipitation was heavy to excessive from the 4th to the 6th and heavy at a few stations on the 16th or 17th, the 24th, and either the 27th or 28th. The heavy rains the first part of the month caused moderately high stages on the Petit Jean and Ouachita rivers, flood stages being exceeded slightly at Danville, Arkadelphia, and Camden. The average rainfall for the State for the 88 stations reporting was 3.51 inches which is 1.39 inches below the mean for the past 44 years. Of the stations with records of 10 years or more, 10 had positive departures and 58 negative. Monthly totals ranged from 0.57 inch at Arkansas City in the southeastern portion to 8.18 inches at Higden on the southeastern slope of the Ozarks. The greatest amount measured in any 24-hour period was 4.00 inches at Story on the 5th. The average number of rainy days was 8.

The weather during the month was very favorable for the growth of hardy vegetation but too cool at times for growth of cotton and corn. The heavy rains from the 4th to the 6th saturated the soil in most portions and preparation for planting of crops was retarded except in the southeastern portion where rainfall was lightest. Some corn was planted the first week of the month but it was near the 15th before much planting was accomplished. Cotton planting was begun in some southern sections about the middle of the month but the cool weather and wet soil were unfavorable for growth and some had to be replanted. The light frost on the 29th did some damage to young cotton but otherwise vegetation was not injured. Practically no other damage was reported either from frost or freezing temperatures during the month. Windstorms and hailstorms were not as severe as usual. Buffalo gnats killed approximately 500 head of livestock the latter part of the month in Cross, Lee, Lonoke, Monroe, and Phillips counties. T.A.M.

Miscellaneous Data

Moderate Hail:--Camden and Paragould, 4th; Rison, 19th.

Heavy Hail:--Warren, 4th, no report on damage; 3 miles north of Arkadelphia, 17th, 6 p. m., severe damage to fruit and gardens over a territory one-fourth mile wide and 5 miles long; Arkadelphia, 17th, considerable damage.

Windstorms:--Oil Trough (10 miles west of Newport), night of 5th-6th, several houses damaged, one demolished, loss $1,000; 6 miles south of Arkadelphia, 18th, severe windstorm accompanied by hail, several barns blown down, cotton gin unroofed, loss $5,000.

Killed by Lightning:--Charleston, 17th, 1; near Texarkana, 18th, 1.

ARKANSAS SECTION

H. S. COLE

ol. XXXIX   Little Rock, Ark., May, 1934   No. 5

GENERAL SUMMARY

Though the mean temperature for the State has been exceeded many times during the past 44 years, the maximum of 103° nas been exceeded only once and that in 1926 when 107° was eported at Newport. Temperatures were below normal for hree or four days during the middle of the month and later rom the 25th to the 28th, while they were above normal in nost sections the remainder of the time. The warmest weather occurred either the 30th or 31st, a number of stations reporting the highest temperature ever recorded for May on the 31st. The mean temperature for the State, based on the reports of 58 stations, was 70.3° which is 1.2° above the mean for the past 44 years. Of the stations for which normals have been omputed, only two had negative departures. Monthly means ranged from 64.1° at Dutton to 73.5° at Osceola. The highest emperature reported was 103° at Camden, Hot Springs, and Subiaco on the 31st; the lowest, 35° at Dutton on the 27th and 28th. Light frost was reported at Story as late as the 26th. Strong northwest winds again brought dust from the Plains States on the 10th, a number of stations in northern Arkansas eporting the sun nearly obscured.

Rainfall was heavy in many sections from the 3d to the 6th and again on the 15th or 16th, while showers were locally neavy on the 24th and 31st. The average precipitation for the State for the 86 stations reporting was 3.36 inches which is 1.63 inches below the mean for the past 44 years. Only three stations with records of 10 years or more had positive deparures. Monthly totals ranged from 1.12 inches at Corning to 5.72 inches at Norman. The greatest amount measured in any 24-hour period was 3.79 inches at Jonesboro on the 15th.

A series of hailstorms and windstorms occurred on the 4th n Little River, Lafayette and Columbia counties. Hail stones as large as 2 1-2 inches in diameter, driven by the wind damaged crops and buildings over a large area. About 20 people were injured and damage to crops and property was $218,200.

The weather was generally favorable for cotton during the nonth except in localities where soil moisture was deficient. Some early cotton had to be replanted, but late cotton stands are excellent. Cultivation and chopping were well under way by the close of the month. The soil was too dry in some sections for corn but the crop is generally in good condition and the fields are clean.

T.A.M.

Miscellaneous Data

Atlanta, 4th, heavy hail, severe damage to crops, $1,200 damage to ouildings. Southern half of Little River County, 4th, windstorm and nailstorm, 15 people injured, $50,000 damage to crops and buildings. McNeil, 4th, windstorm, $1,000 damage to buildings. Stamps, 4th, windstorm and hailstorm, 2 people injured, severe damage to crops, 6,000 damage to buildings. Stephens, 4th, windstorm and hailstorm, one person injured, $90,000 damage to crops and buildings. Waldo, 4th, windstorm and hailstorm, 2 people injured, $70,000 damage to crops and buildings. DeRoche, 6th, windstorm, several buildings unroofed, timber damaged, loss $1,500. Health, 23d, heavy hail, no report on damage. Levy, 31st, heavy hail, considerable damage to gardens and truck crops.

Killed by Lightning, Providence, 24th, one.

Moderate Hail: El Dorado and Hope, 4th, no report on damage; England, 30th, slight damage.

Correction: April, 1934

Maximum temperature at Osceola should be 88o on 26th.

ARKANSAS SECTION

H. S. COLE

Vol. XXXIX   Little Rock, Ark., June, 1934   No. 6

GENERAL SUMMARY

June, 1934, was the third warmest June for the State as a whole, the mean temperature being exceeded only by the correspondingly warm months of 1914 and 1925, but in the northwestern portion of the State it was the warmest on record. Temperatures were above normal during the entire month at Fort Smith except on the 11th but in eastern and southern portions daily averages were not quite so high. The warmest weather occurred in most sections the latter part of the month when most stations had temperatures of 100° or slighly higher for several days, while temperatures were lowest around the first or during the middle of the month. The average temperature for the State, based on the reports of 60 stations, was 81.1° which is 4.0° above the mean for the past 44 years. All stations had positive departures ranging from 1.6° in extreme southern counties to 6.9° at Rogers in Benton county. Monthly means ranged from 74.4° at Dutton to 83.8° at three stations. The highest temperature recorded was 108° at Ozark on the 30th; the lowest, 49° at Dutton on the 20th.

Rainfall was general over the State from the 2d to the 6th and again on the 10th or 11th but thereafter amounts were generally light to moderate with showers occurring only locally. Many stations reported no rain after the 11th. On the night of the 10th at 8 p. m. a small tornado struck Tontitown in northern Washington County and traveled in a southernly direction. It was followed by destructive hail which fell over an area 4 miles wide and 12 miles long extending from Tontitown southward to Greenland. Damage from tornado, windstorm, and hail was estimated at $450,000.

The average precipitation for the State for the 88 stations reporting was 2.88 inches which is 1.11 inches below the mean for the past 44 years. Of the 68 stations with records of 10 years or more, only 14 had positive departures. Monthly totals ranged from 0.70 inch at Jonesboro to 6.71 inches at Hot Springs. The greatest amount measured in any 24-hour period was 3.81 inches at Yancopin on the 5th.

The weather during June was favorable for cotton in the lowlands but in some northern and western sections the soil was too dry the latter part of the month for good growth. It was too dry for corn, meadows, pastures, truck, and fruit in most of the uplands the latter part of the month except in localities where showers occurred.

T.A.M.

Miscellaneous Data

Tornado:---Tontitown, 10th, 8 p. m., from north, path narrow and about 1 1-2 miles long, property damage $13,000.

Windstorms and Electrical Storms:---2d and 4th, Stuttgart and vicinity, $2,000 damage to crops and $4,000 damage to electrical equipment.

Windstorm and Hailstorm:---10th, from Tontitown southward to Greenland, $237,000 damage to buildings and $200,000 damage to crops.

Heavy Hail:---Oden, 2d. no report on damage; Sunset and vicinity, 11th, severe damage to crops; north of Dutton, 12th, severe damage to crops.

Moderate Hail:---Story, 2d, slight damage to crops; Bella Vista, Hiwasse, and Sulphur Springs, ; 10th, slight damage to crops.

Killed by lightning:--- near Stuttgart, 4th, one.

Correction, May, 1934

Date of moderate hail at England should be 20th.

ARKANSAS SECTION

H. S. COLE

oL. XXXIX   LITTLE ROCK, ARK., JULY, 1934   No. 7

GENERAL SUMMARY

July, 1934, was the warmest July on record in western and orthwestern portions of the State but in central and eastern ortions it was not quite so warm as July, 1930. The State ean, however, was the highest on record, being 0.8° higher an that of July, 1930. Maximum temperatures were 100° r higher during the entire month at Ozark, for 28 days at ubiaco, and for 27 days at Lead Hill, while a number of staons in the northwestern portion and along the western border ad 20 or more days with 100° or higher. The average temerature for the State, based on the records of 60 stations, was 5.5° which is 5.1° above the mean for the past 44 years. All ations had positive departures and in the western portion in me sections temperatures were above normal for every day of e month, while in central and eastern portions there were om three to five days with temperatures normal or below. onthly means ranged from 79.9° at Dutton to 89.2° at Fort mith. The highest temperature recorded was 112° at Thornurg on the 20th and at Lutherville on the 24th; the lowest, 7° at Dutton on the 7th.

The average precipitation for the State for the 88 stations reorting was 1.66 inches which is 2.15 inches below the mean r the past 44 years. This is the lowest average since 1930 nd the fourth lowest on record. Rainfall was decidedly defiient in the northwestern portion of the State and in many orthern and western counties. Gravette had only 0.04 inch uring the month, Mountain Home 0.12 inch, and Ft. Smith .15 inch. Showers occurred in most sections during the first eek of the month, in the northern portion about the middle f the month, and in most sections from the 27th to the 31st. owever, much of the beneficial effects of the rains was offset y the high temperatures prevailing during this time. Of the tations with records of 10 years or more, only four had posiive departures and these were caused by locally heavy rains. onthly totals ranged from 0.04 inch at Gravette to 5.71 nches at Marked Tree. The greatest amount measured in any 4-hour period was 4.65 inches at Marked Tree on the 7th.

In the highlands cotton was small and blooming in the top t the close of the month. Corn was almost a failure in all ill sections and has been badly damaged in many sections of he lowlands. Meadows, pastures, truck, and gardens were adly damaged in all sections of the uplands. Peaches were lentiful but were small and generally of poor quality. All treams remained at low stages during the month. T.A.M.

Miscellaneous Data

Tornadoes:--Subiaco, 14th, 6 p. m., from west, path narrow, property amage $4,000.

Windstorms:--Camden, 6th, considerable damage, plate glass windows roken and signs blown down. Little Rock and vicinity, 15th, $40,000 amage, plate glass windows broken, Dixie Cotton Oil Co. seedhouse nroofed, large number of shade trees blown down. North Little Rock, 6th, several thousand dollars damage, plate glass windows broken, signs, awnings, and shade trees blown down. Grannis, 30th, $250 damage to buildings, signs, and trees.

Heavy Hail:--North Little Rock, 15th, slight damage. Thornburg, 30th, considerable damage to melons, truck crops, and fruit trees.

Killed or Injured by Lightning:--Hope, 6th, two injured, one seriously; near Newport, 6th, one killed; near Mountain Home, 14th, one killed, five slightly injured.

Slight earthquake at Jonesboro 9:15 p. m. 2nd.

Errata:--Page 26, wind direction at Fayetteville and Prescott should be south.

ARKANSAS SECTION

H. S. COLE

Vol. XXXIX Little Rock, Ark., August, 1934 No. 8

GENERAL SUMMARY

This was the hottest August in western Arkansas since records have been kept but in the eastern portion of the State mean temperatures were not quite so high as in 1881. High day temperatures prevailed in all sections during the first half of the month and in some sections temperatures of 100° or higher occurred as late as the 25th. The maximum temperature of 116° at Lead Hill on the 9th equals the record established at Jonesboro, July 12, 1901. The average temperature for the State, based on the records of 60 stations, was 84.8° which is 5.0 above the mean for the past 44 years. This is 2.2° higher than the correspondingly warm months of 1896 and 1918. Monthly means ranged from 78.6° at Dutton to 88.6° at Hot Springs, with departures in some sections exceeding 7.0°. The highest temperature recorded was 116° at Lead Hill on the 9th; the lowest, 48° at Dutton on the 30th.

Scattered showers occurred at several stations during the first 12 days of the month with a few locally heavy rains in the Ouachita Mountains. Light to moderate showers with several heavy rains occurred in many sections from the 13th to the 18th while rainfall was much more general from the 20th to the 25th though quite an area in the southwestern portion of the State received only a few showers. The average precipitation for the State for the 87 stations reporting was 2.75 inches which is 0.95 inch below the average for the past 44 years. Monthly totals ranged from 0.12 inch at Hope to 7.43 inches at St. Francis. The greatest amount measured in any 24-hour period was 3.09 inches at Ozark on the 23d. The average number of rainy days was 6.

The weather was unfavorable for cotton in all sections af the uplands and in some sections of the lowlands during the greater part of the month. The high temperatures did as much damage as the lack of moisture. Even where good showers occurred, nearly all crops deteriorated because of the heat. In the uplands and in the southern portion of the State cotton was opening by the middle of the month and much of it prematurely where rainfall was lightest. By the close of the month much of it had been picked in the southern portion. Early corn was nearly a total loss in the uplands and was badly damaged in the lowlands. Meadows, pastures, and other crops were nearly destroyed in the uplands by the middle of the month but after the rains late crops were planted rapidly in central and northern portions. However, the soil was still too dry in quite an area in the southwestern portion at the close of the month. All streams were at low stages during the month. The Arkansas River at Little Rock reached the record low stage of 4.2 feet below zero, being 1.2 feet lower than the previous record. Stock water was scarce during the greater part of the month and fish died in small lakes because of the low water.

T.A.M.

Miscellaneous Data

Windstorms:---Ashdown, 9th, 2 persons injured, property damage $10,000. Glenwood and vicinity, 9th, houses unroofed, plate glass windows broken, damage $10,000. Near Hazen, 17th, $500 damage to rice from heavy rain.

Heavy Hail:---Thornburg, 3d and 9th, no report on damage.

Moderate Hail:---Glenwood, 9th, considerable damage.

Killed by Lightning:---Old Austin, 3d, 2 killed, 3 injured.

Vol. XXXIX Little Rock, Ark., September, 1934 No. 9

GENERAL SUMMARY

This was the coolest September since 1928 and the wettest for the State as a whole since 1925. However, in some sections in the western portion it was the wettest September since records have been kept. The average temperature for the State, based on the reports of 61 stations, was 71.3° which is 3.1° below the mean for the past 44 years, this being the first month since March with the mean temperature below normal. Monthly means ranged from 63.6° at Dutton in the Ozarks to 76.8° at Magnolia in a southern border county. Of the stations with records of 10 years or more, only five, located mostly along the southern border, had positive departures. The highest temperature recorded was 100° at Dumas on the 11th and at three other stations on later dates; the lowest, 37° at Mount Ida and Thornburg on the 17th. The greatest daily range was 49° at Carthage on the 18th.

Rainfall was heavy to excessive in the northwestern portion of the State and in the Ouachita Mountains the first few days of the month and heavy in most sections either the 28th or 29th. Rains of an inch or more also occurred at a number of stations about the middle of the month and on either the 20th or 21st. The average precipitation for the State for the 89 stations reporting was 5.46 inches which is 2.08 inches above the mean for the past 44 years. Only 14 of the stations for which normals have been computed had negative departures. Monthly totals ranged from 1.44 inches at Magnolia to 14.13 inches at Sunset. Five stations had monthly totals of less than 2.00 inches while an equal number had over 10.00 inches. The greatest amount measured in any 24-hour period was 6.07 inches at Sunset on the 2d. The average number of rainy days was 8.

The rainfall the first part of the month was very beneficial to all crops but in some sections along the Mississippi River and in the southern portion of the State it was insufficient. Cotton picking was delayed some by the rainy weather during the month but this work is much more advanced than usual at this season of the year. In the southern portion most of the crop had been picked by the end of the month and picking had progressed rapidly elsewhere. In the lowlands late bolls filled out after the rains and some correspondents reported new blooms. Late corn was greatly benefited by the rains except in the southern portion where rainfall was lightest. Meadows, pastures, and truck crops revived and considerable hay was made. Much more than the usual amount of wheat, oats and rye was sown, much of it for pasture. The soil was still too dry in some sections of the southern portion of the State at the close of the month for growth of fall crops.

H. S. COLE

Vol. XXXIX Little Rock, Ark., October, 1934 No. 10

GENERAL SUMMARY

October was a warm, dry month, the warmest since 1931 and the driest since 1924. Temperatures were above normal from the 10th to the 27th, inclusive, with the warmest weather occurring generally from the 19th to the 23d. Departures were as high as 16° above normal in central and western sections on the 23d. The average temperature for the State, based on the reports of 59 stations, was 66.3° which is 3.7° above the mean for the past 44 years. All stations with records of 10 years or more had positive departures. Monthly means ranged from 60.2° at Dutton to 72.2° at Magnolia. The highest temperature recorded was 96° at Okay on the 23d; the lowest, 25° at Dutton on the 28th. The greatest daily range was 52° at Calico Rock on the 31st.

Scattered showers occurred in the eastern portion of the State about the 10th and in the northern portion from the 17th to the 20th, and moderate to heavy showers in many sections on the 24th or 25th, a number of stations reporting an inch or more. The average precipitation for the State for the 88 stations reporting was 0.79 inch which is 2.30 inches below the mean for the past 44 years. All stations had negative departures. Camden, Hope, and Highland had no rain during the month and Fulton and Magnolia only a trace, while the greatest monthly amount reported was 2.05 inches at Marianna. Only 25 of the 88 stations had monthly totals of more than 1.00 inch, while a number had less than 0.25 inch. The greatest amount measured in any 24-hour period was 2.00 inches at Marianna on the 25th. The average number of rainy days was 2.

The weather during October was very favorable for harvesting all crops. Cotton picking which was farther advanced than usual progressed rapidly and only a small amount remained in the fields in the lowlands at the end of the month. The rains the latter part of September caused green bolls to mature and yields were better than were expected earlier in the fall. Soil moisture was sufficient in most sections to mature late corn. The weather was very favorable for meadows, pastures, and truck crops the first of the month and a large amount of hay was made, but the soil became too dry in many sections before the close of the month for good growth, especially in the southern portion of the State and where rainfall was lightest. Killing frost occurred in northern counties either the 28th or 29th, damaging late truck crops. Streams continued at low stages during the month.

T.A.M.

Miscellaneous Data

Damage by Lightning: Conway, 24th, barn destroyed, loss $750.
Moderate Hail: Brinkley and Dutton, 31st, no damage reported.

Correction: September, 1934
Prevailing wind direction at Rogers should be s.

ARKANSAS SECTION

H. S. COLE

Vol. XXXIX Little Rock, Ark., November, 1934 No. 11

GENERAL SUMMARY

Temperature and precipitation were both above normal for November, 1934, this being the wettest November on record and surpassing the correspondingly wet months of 1902, 1919, and 1931. Temperatures were considerably above normal from the 3d to the 10th and from the 17th to the 21st, with departures as high as 12° above normal on the 8th and 9th and from 16° to 20° above from the 18th to the 20th, while the coldest weather occurred generally either the 12th, 15th, or 23d. The average temperature for the State, based on the reports of 61 stations, was 54.0° which is 2.4° above the mean for the past 44 years. Monthly means ranged from 49.4° at Dutton to 59.0° at El Dorado. The highest temperature reported was 88° at Conway on the 7th and at three other stations on later dates; the lowest, 20° at Dutton and Thornburg on the 12th and later during the month. The greatest daily range was 50° at Marshall on the 1st and at Batesville on the 7th.

Moderate to heavy rains occurred the first of the month and heavy to excessive rains from the 19th to the 22d, a number of stations reporting from 2.00 inches to over 3.00 inches of rain on the 21st. From the 25th to the 30th precipitation occurred with only a day intervening. Snowfall was heaviest on record for November in northwestern counties, Eureka Springs reporting 11.0 inches on the 29th and 30th and Bentonville and Fayetteville over 9.0 inches. The average precipitation for the State for the 89 stations reporting was 6.89 inches which is 3.19 inches above the mean for the past 44 years. Monthly totals ranged from 3.62 inches at Mountain Home to 12.87 inches at Arkansas City, ten stations having monthly totals exceeding 10.00 inches. The greatest amount measured in any 24-hour period was 5.14 inches at Dumas on the 21st. The average number of rainy days was 9.

Although precipitation during November was the heaviest on record, the weather was not unfavorable for harvesting fall crops. Cotton picking was practically finished and nearly all crops gathered before the rainy period from the 19th to the 22d. Killing frost occurred in northern counties the latter part of October, in most of the eastern half of the State on the 12th, and in nearly all of the southwestern portion on the 23d, but in some sections of Columbia and Union counties vegetation was not killed until December. T.A.M.

Tornadoes.

Western part of Ashley County, 8 miles northwest of Crossett, during night of 20th, from sw, none injured, property damage $5,000.

Five miles west of McGehee to near McGehee, 20th, 3:20 a. m., from west, two people killed, one injured, property damage $10,000.

McGehee and vicinity, 27th, 1:15 p. m., from sw, path narrow, property damage $3,000.

Corrections: October, 1934

Harrison, mean temperature should be 62.0°, departure from normal +2.8; state mean temperature should be 66.2°, departure +3.6°.

H. S. COLE

ol. XXXIX LITTLE ROCK, ARK., DECEMBER, 1934 No. 12

GENERAL SUMMARY

Temperatures were mostly below normal the first half of ecember, while they were generally above the latter half except for four or five days. Departures were from 12° to 16° low normal on the 7th and 8th and from 17° to 21° below the 11th, when nearly all stations had the coldest weather the month. The average temperature for the State, based the reports of 61 stations, was 41.5° which is 1.2° below e mean for the past 44 years. Of the stations for which rmals have been computed, only 8 had positive departures. onthly means ranged from 35.4° at Deer in the Ozarks to .8° at Magnolia in a southern border county. The highest mperature recorded was 74° at Portland on the 24th; the west, 4° at Dutton on the 11th. The greatest daily range as 48° at Camden and Okay on the 13th.

Rainfall was heavy to excessive in most sections on the 2d 3d and moderate to heavy from the 17th to the 19th, while was generally light to moderate from the 24th to the 31st. ost stations had five rainy days after the 24th and a few reorted rain every day but amounts exceeding one inch occurred only a few stations in the southeastern portion. Snow fell the 7th, 10th, and the night of the 18th-19th but measureble amounts were reported from only 20 stations. The greatt depth for the month was 2.3 inches at Eureka Springs, and e average depth for the State for the 91 stations was 0.2 inch. he average precipitation for the State for the 91 stations reorting was 3.78 inches which is 0.51 inch below the mean for e past 44 years. Monthly amounts ranged from 0.95 inch Bentonville to 6.85 inches at England. The northwestern ortion of the State received less than 2.00 inches of rainfall, hile central and south-central sections had from 5.00 inches over 6.00 inches. The greatest amount measured in any 24our period was 2.81 inches at Arkadelphia on the 3d. The verage number of rainy days was 9.

The weather was favorable for out-door work the first half of he month but generally unfavorable the latter half because of he cloudy, rainy weather. Wheat, oats, and other winter rops were in good to excellent condition at the close of the onth except that oats were frozen down in some portions dur ng the cold weather the first half of the month. Some plowng was done but the soil was too wet most of the time in most ections.

Temperature and precipitation departures computed for stations having ten or more years record. T. less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ^{a},^{b},^{c}, number of days missing. †Also on other dates. ‡‡P. O. addresses as follows:— Big Lake Outlet, Manilla: Freeman Springs, Dover: Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rosebud, Mt. Vernon, Route 2. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ‖‖24 hours ending 7 a. m. *Included in next measurement. Data in italics partly interpolated.

Daily Precipitation for December 1934

Vol. XXXIX Little Rock, Ark., Year, 1934 No. 13

GENERAL SUMMARY

The year 1934 like 1930 will long be remembered for its hot summer but this year high temperatures prevailed for a much longer period than in 1930. Maximum temperatures exceeding 100° began the latter part of June and in many sections in western and northwestern portions of the State continued with little interruption until the middle or latter part of August.

The mild weather in January was followed by temperatures somewhat below normal in February and March but beginning with April averages were above normal until September though departures were not unusual until in June. The mean temperature for July and August was the highest for the past 44 years. A cool September brought relief from the hot summer but temperatures were again above normal in October and November. The average temperature for the State for the year was 62.8° which is 1.4° above the mean for the past 44 years. Annual means ranged from 56.8° at Dutton in the Ozarks to 67.1° at El Dorado in a southern border county. Of the 53 stations with records of 10 years or more, only two had negative departures. Extremes ranged from 2° at both Dutton and Lead Hill on January 30th to 116° at Lead Hill on August 9th. The maximum of 116° equals the record for the State established at Jonesboro July 12th, 1901.

The average precipitation for the State was 42.47 inches which is 5.68 inches below the mean for the past 44 years. Annual amounts ranged from 31.36 inches at Mammoth Spring to 54.01 inches at Warren. Precipitation was above normal in March, September, and November, below in other months, with the least amounts of rainfall occurring in July and October. Rainfall during the growing season from April to October, inclusive, was 73% of the normal though in June, July, August, and October amounts were seriously deficient in many sections. Crops began deteriorating in northern and western sections of the State the latter part of June and in most other sections in July. The high day temperatures did as much damage as the lack of moisture. Even where good showers occurred, nearly all crops suffered because of hot winds. Streams reached record low stages, stock water was scarce, and fish died in small shallow lakes.

The last killing frost in spring occurred March 19th in some central and southern sections and elsewhere about March 28th except in two instances in mountainous sections where vegetation was killed as late as April 20th. The first killing frost in autumn occurred October 28th in northern border counties, November 12th in most of the eastern half of the State, and November 23d in nearly all of the southwestern portion except in Columbia and Union counties where it occurred December 8th. The growing season ranged from 213 days in the northern portion of the State to 264 days at El Dorado and Magnolia. Early fruit buds were damaged somewhat by frosts in spring and truck crops in the fall.

Five small tornadoes were reported during the year, one each in June and July and three in November. They were much less destructive than usual, only two people being killed, one injured, and property valued at $35,000 destroyed. Windstorms occurred during the spring and summer months but the most destructive storm was in June. Property damage during the year was $315,750. Hailstorms were unusually severe in May and June in a few sections, the loss being over $200,000 in each month. Loss for the year was $418,400. In March loss from floods was $37,450 and the damage from excessive rain $20,000.

T.A.M.

WEATHER BY MONTHS

January: A cold wave with temperatures ranging from 2° in the northwestern portion to 20° in southern border counties overspread the State on the 29th bringing the coldest weather of the month to nearly all sections. The average temperature for the State was 44.5° which is 3.1° above the mean for the past 44 years, all stations having positive departures. Precipitation was 1.39 inches below normal, with only 6 stations with records of 10 years or more having positive departures. Monthly amounts ranged from 1.39 inches at Mammoth Spring to 5.50 inches at Crossett with stations in the northern half of the State receiving the least amount of rainfall. Snowfall was light, the greatest depth reported being 3.0 inches at Eureka Springs. The cloudy, rainy weather the first part of the month was unfavorable for out-door work but thereafter until the last three days of the month conditions were very favorable. Much more than the usual amount of plowing was done but the weather was too warm for fruit.

February: Except for a brief period from the 9th to the 11th, temperatures were generally above normal until the 17th, but thereafter they were continuously below normal for the remainder of the month with departures ranging from 10° to more than 25° below normal from the 24th to the 28th. A few stations reported snow flurries and a little sleet either the 9th or 10th and nearly all stations some snow from the 24th to the 28th, the greatest depth reported being 2.0 inches. Glaze formed in some sections on the 9th and 10th and in northern and central portions of the State on the 24th and 25th, several thousand dollars damage being done to telephone, telegraph, and power lines and to fruit and shrubbery. The ice and sleet coated the ground, making travel hazardous. Monthly totals of precipitation ranged from 0.37 inch at Higden to 5.76 inches at Portland, with stations in northern and central portions receiving approximately 50% of the average rainfall. Much more than the usual amount of plowing was done the first part of the month and in southern and central sections spring oats and grass seeds were sown, and some gardens planted. The cold wave of the 25th and 26th damaged early potatoes and gardens in northern and central portions.

March: Temperatures fluctuated considerably during the month and were as low as 4° in the Ozarks and 26° in southern border counties. The average temperature for the State was 2.7° below normal, all stations with records of 10 years or more having negative departures. Snow occurred in the northwestern portion on the 26th and 27th, Eureka Springs reporting a depth of 4.0 inches for the two days. Precipitation was above normal with only 9 stations having negative departures. Monthly amounts ranged from 2.10 inches at Bentonville to 10.29 inches at Pine Bluff. The weather was favorable for farm work from the 10th to the 17th, unfavorable the remainder of the month. Flood losses were as follows:—On the Black and White rivers, $9,350; on the Ouachita River $28,100. The damage to roads and bridges in Craighead County from excessive rain was $20,000.

April: Though the average rainfall for the State was 1.39 below normal, the heavy rains the first part of the month caused moderately high stages on the Petit Jean and Ouachita rivers, flood stages being exceeded slightly at Danville, Arkadelphia, and Camden. Monthly totals ranged from 0.57 inch at Arkansas City in the southeastern portion to 8.18 inches on the southeastern slope of the Ozarks. The average temperature for the State was 1.1° above normal but temperatures were as low as 29° in the Ozarks on the 13th. The heavy rains from the 4th to the 6th saturated the soil in most portions and preparation for planting crops was retarded except in the southeastern portion where rainfall was light. Cotton planting was begun in some southern sections about the middle of the month but the cool weather and wet soil were unfavorable for growth and some had to be replanted. Buffalo gnats killed approximately 500 head of livestock the latter part of the month in Cross, Lee, Lonoke, Monroe, and Phillips counties. Strong northwest winds brought dust from the Plains States on the 11th and 19th and from the 22d to the 26th reducing the visibility on the 11th and 24th occasionally to 2 1-2 or 3 miles.

May: Though the mean temperature for the State has been exceeded many times, the maximum of 103° has been exceeded only once and that in 1926 when 107° was reported at Newport. A number of stations reported the highest temperature ever recorded for May on the 31st. Precipitation was 1.63 inches below normal, with monthly totals ranging from 1.12 inches at Corning to 5.72 inches at Norman. A series of hailstorms and windstorms occurred on the 4th in Little River, Lafayette and Columbia counties. Hailstones as large as 2 1-2 inches in diameter, driven by the wind, damaged crops and buildings over a large area. About 20 people were injured and damage to crops and property was $218,200. Strong northwest winds again brought dust from the Plains States on the 10th, a number of stations in northern Arkansas reporting the sun nearly obscured. The soil was too dry in some sections for corn but conditions were mostly favorable for cotton. Light frost was reported at Story in the Ouachita Mountains as late as the 26th.

June: This was the third warmest June for the State as a whole, but in the northwestern portion of the State it was the warmest on record. Temperatures were above normal during the entire month at Fort Smith except on the 11th but in eastern and southern portions daily averages were not quite so high. Rainfall was general over the State from the 2d to the 6th and again on the 10th or 11th but thereafter amounts were generally light to moderate with showers occurring only locally. Many stations reported no rain after the 11th. Monthly totals ranged from 0.70 inch at Jonesboro to 6.71 inches at Hot Springs. On the night of the 10th, a small tornado struck Tontitown and traveled in a southerly direction. It was followed by destructive hail over an area 4 miles wide and 12 miles long extending from Tontitown southward to Greenland. Damage from tornado, windstorm and hail was estimated at $450,000. The weather was favorable for cotton in the lowlands but in some northern and western sections the soil was too dry the latter part of the month for good growth. It was too dry for corn, meadows, pastures, truck and fruit in most of the uplands the latter part of the month.

July: This was the warmest July on record in western and northwestern portions of the State but in central and eastern portions it was not quite so warm as July, 1930. Maximum temperatures were 100° or higher during the entire month at Ozark, for 28 days at Subiaco, and for 27 days at Lead Hill. The highest temperature reported was 112° at Thornburg on the 20th and at Lutherville on the 24th. Precipitation was 2.15 inches below normal, this being the lowest average since 1930 and the fourth lowest on record. Rainfall was decidedly deficient in the northwestern portion of the State and in many northern and western counties. Gravette had only 0.04 inch during the month, Mountain Home 0.12 inch, and Ft. Smith 0.15 inch. Though good showers occurred in some sections much of the beneficial effects was offset by the high temperatures prevailing during this time. In the highlands cotton was small and blooming in the top at the close of the month. Corn was almost a failure in all hill sections and had been badly damaged in many sections of the lowlands. Meadows, pastures, truck and gardens were badly damaged in all sections of the uplands. Peaches were plentiful, but were small and generally of poor quality.

August: This was the hottest August in western Arkansas since records have been kept but in the eastern portion of the State mean temperatures were not quite so high as in 1881. The average temperature for the 60 stations was 84.8° which is 5.0° higher than the mean for the past 44 years. This is 2.2° higher than the correspondingly warm months of 1896 and 1918. The average precipitation for the State was 0.95 inch below normal, with monthly totals ranging from 0.12 inch at Hope to 7.43 inches at St. Francis. The weather was unfavorable for growth of all crops in the uplands and in many sections of the lowlands. Early corn was a total loss in the uplands and was badly damaged in the lowlands. In the uplands and in the southern portion of the State cotton was opening by the middle of the month and much of it prematurely where rainfall was lightest. Showers were fairly general from the 20th to the 25th and late crops were planted rapidly in central and northern portions. However, the soil was still too dry in quite an area in the southwestern portion at the close of the month. The Arkansas River at Little Rock reached the record low stage of 4.2 feet below zero, being 1.3 feet lower than the previous record.

September: The average temperature for the State was 3.1° below normal, this being the coolest September since 1928 and the first month since March with the mean temperature below normal. Rainfall was heavy to excessive in the northwestern portion of the State and in the Ouachita Mountains the first few days of the month and heavy in most sections either the 28th or 29th. The average precipitation for the 89 stations was 5.46 inches which is 2.08 inches above normal. Monthly totals ranged from 1.44 inches at Magnolia to 14.13 inches at Sunset, with five stations having monthly amounts over 10.00 inches. Cotton picking was delayed some by the rainy weather but this work was much more advanced than usual at this season of the year. In the lowlands late bolls filled out rapidly after the rains. Late corn was greatly benefited by the rains except in the southern portion where the soil was still too dry at the close of the month.

October: October was a warm, dry month, the warmest since 1931 and the driest since 1924. The average temperature for the State was 3.6° above normal while precipitation was 2.30 inches below normal, this being the least monthly amount for the year. Camden, Hope and Highland had no rain during the month and Fulton and Magnolia only a trace, while the greatest monthly amount was 2.05 inches at Marianna. The weather was very favorable for harvesting all crops. Cotton picking was practically completed except in some sections of the lowlands. Killing frost occurred in northern counties either the 28th or 29th, damaging late truck crops.

November: Temperature and precipitation were both above normal for November, this being the wettest November on record and surpassing the correspondingly wet months of 1902, 1919, and 1931. Moderate to heavy rains occurred the first of the month and heavy to excessive rains from the 19th to the 22d. From the 25th to the 30th precipitation occurred with only a day intervening. Snowfall was the heaviest on record

The departures from normal temperature and precipitation are computed only for stations having ten or more years record, but all complete reports are used in determining section means. T., less than 0.01 inch rain or melted snow. Reference letters ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing: for example ^{b} represents two days missing. † Also on later dates. ‡‡ Post-office addresses of these stations as follows:-Big Lake Outlet, Manilla, Ark., Freeman Springs, Dover, Ark., Index, Route 5, Texarkana, Ark., Lutherville, R. F. D. No. 1, Lamar, Ark.

(*Continued from Page 50*)

for November in northwestern counties, Eureka Springs reporting 11.0 inches on the 29th and 30th and Bentonville and Fayetteville over 9.0 inches. Monthly totals of precipitation ranged from 3.62 inches at Mountain Home to 12.87 inches at Arkansas City, ten stations having monthly totals exceeding 10.00 inches. Killing frost occurred in the eastern half of the State on the 12th and in nearly all of the southwestern portion on the 23d.

December: Temperatures were mostly below normal the first half of the month, while they were generally above the latter half except for four or five days. The average temperature for the State was 1.2° below normal, while precipitation was 0.51 inch below. Monthly amounts ranged from 0.95 inch at Bentonville to 6.85 inches at England. Snow fell on the 7th, 10th, and the night of the 18th-19th but measureable amounts were reported from only 20 stations. The greatest depth for the month was 2.3 inches at Eureka Springs. The weather was favorable for out-door work the first half of the month but generally unfavorable the latter half. Wheat, oats, and other winter crops were in good to excellent condition at the close of the month.

Corrections:

April: Ft. Smith, monthly mean temperature should be 63.2°, departure from normal +1.4°.

June: Gravette, total precipitation should be 2.09 inches.

October: Jonesboro, precipitation departure should be −2.77 inches.

December: Amity, mean minimum temperature should be 30.7°, monthly mean temperature 41.1°, departure from normal −1.9°. Fort Smith, maximum temperature on 7th should be 39° and on 25th 55°, mean maximum should be 49.2°.

H. S. COLE

ol. XL LITTLE ROCK, ARK., JANUARY, 1935 No. 1

GENERAL SUMMARY

Temperature and precipitation were both above normal, iis being the fifth successive January with temperatures con- derably above the average. Warm weather prevailed until e 20th, with departures in the western part of the State as igh as 21° above normal on the 9th and 24° above on the 5th. A cold wave with drops in temperature exceeding 50° many sections overspread the State on the 21st and lasted ntil the 25th. The average temperature for the State, based the records of 61 stations, was 43.6° which is 2.2° above e mean for the past 45 years. Monthly means ranged from 3.4° at Batesville to 50.4° at Magnolia. Blytheville and onesboro in the northeastern portion of the State were the nly stations with negative departures. The highest tempera- ire reported was 86° at Camden on the 16th; the lowest, 11° elow zero at Deer on the 21st. This is the lowest temperature or January since 1930. The greatest daily range was 55° at ooneville on the 25th.

Showers occurred on the 1st and either the 7th or 8th and a ainy period from the 16th to the 21st. Many stations in eastrn and southern portions had from 5.00 to 7.00 inches uring this latter period. Heavy snow fell in the southeastern ortion and in southern border counties on the 21st, the greatst depth reported being 6.5 inches at Warren. The ground as warm and some of it melted beneath the surface at first. t Crossett the total fall was estimated at from 8 to 10 inches hough the measurement was only 4.0 inches. The average recipitation for the State for the 91 stations reporting was 5.79 nches which is 1.50 inches above the mean for the past 45 ears. Most stations in the northwestern portion had negaive departures, in other portions positive. Monthly totals anged from 2.48 inches at Gravette to 12.51 inches at Helena. Two other stations had monthly amounts exceeding 10.00 nches and a number 8.00 inches or more. The heavy rains aused moderately high stages on the lower White, Black, and t. Francis rivers and flood stages on the Petit Jean and Ouachta rivers. Flood losses were as follows: On the Black river, 1,000; the Petit Jean, $400; the White, $50; the Ouachita, 15,845.

The weather the first half of the month was favorable for ut-door activities, fruit trees being pruned, orchards cleaned, nd some plowing done, while the latter half was mostly unavorable, the temperature being too low and the soil too wet. Peaches were severely damaged in some localities by the cold vave of the 21st. Wheat, oats, rye, meadows and truck were lso damaged by the low temperatures and the frequent freezng and thawing.

T.A.M.

Windstorms:—Stamps, 7th, three persons injured and considerable damage to roofs of buildings.
Near Louann, 19th, several oil derricks blown down, buildings damaged, loss $1,500.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

H. S. COLE

. XL LITTLE ROCK, ARK., FEBRUARY, 1935 No. 2

GENERAL SUMMARY

Iild weather prevailed until the 24th with departures con- rably above normal on the 5th, 8th, 14th, and 21st. On 25th a cold wave overspread the State bringing the coldest ther of the month to all sections, temperatures being as low ° in the western portion and 16° in the southeastern. average temperature for the State, based on the records of tations, was 45.8° which is 2.2° above the mean for the 45 years, only 6 stations having negative departures. thly means ranged from 40.0° at Deer in the Ozarks to ° at Warren in the southeastern portion. The highest perature reported was 87° at Dumas on the 21st; the low- 8° at Thornburg on the 27th. The greatest daily range 52° at Pocahontas on the 21st.

recipitation was general over the State from the 7th to the and on the 13th and 25th. Sleet or snow was reported on 25th or 26th but nearly all of it melted as it fell. Some v occurred in the northwestern portion on the 16th. The age depth for the 94 stations reporting was a trace, only 11 ons having measureable amounts for the month. The age precipitation for the State for the 94 stations reporting 2.44 inches which is 0.88 inch below the mean for the past ears. Only 7 stations with records of 10 years or more positive departures. Monthly totals ranged from 0.58 at Rogers to 5.23 inches at Warren. The greatest amount ainfall measured in any 24-hour period was 4.00 inches at rren on the 8th. The average number of rainy days was 6. he weather was favorable for out-door activities the first days of the month but the soil was generally too wet for ving because of previous rains. The rather heavy rainfall astern and southern portions from the 7th to the 9th de- d farm work but some truck was planted in a few southern central localities. Considerable plowing was done in the hwestern portion about the middle of the month and in t up-land sections from the 20th to the 24th. Spring oats, toes, and garden vegetables were planted in central and hern portions before the cold wave of the 25th. The weath- vas favorable during the month for growth of wheat, oats, meadows, and pastures until the 25th when some damage urred from the low temperatures. T.A.M.

Tornadoes:

eenwood (2 1-2 miles southeast of), 24th, 9:00 p.m., from south- , path 400 feet wide, three persons injured, property damage $3,500. ich (1 mile northwest of), 24th, 9:30 p. m., from southwest, path ow to 2000 feet, 6 persons injured, property damage $4,000. Luther- and vicinity, 24th. 10:30 p. m. from southwest, path 300 feet wide, e injured, property damage $8,000. It was probably the same torna- hat struck Greenwood and Branch and may have been the same n that hit Lutherville.

Vol. XL LITTLE ROCK, ARK., MARCH, 1935 No. 3

GENERAL SUMMARY

This was the warmest March since 1921 and the wettest since 1922, though precipitation in the southern third of the State was generally below normal. Temperatures were considerably above normal from the 2d to the 6th and from the 19th to the 26th with the warmest weather occurring generally during the latter period. Freezing temperatures occurred in nearly all sections the first half of the month and at a few stations in the northwestern portion on the 28th and 29th. The mean temperature for the State, based on the records of 61 stations, was 58.7° which is 6.2° above the mean for the past 45 years, all stations having positive departures. Monthly means ranged from 52.4° at Sunset to 64.9° at Warren. The highest temperature reported was 90° at Rison on the 25th and at Warren on the 27th; the lowest, 18° at Sunset on the 7th.

Rainfall was heavy to excessive in many sections on the 4th or 5th and in the northern half of the State from the 10th to the 12th and from the 21st to 24th, while it was heaviest in eastern and southern sections the 30th and 31st. The average precipitation for the State for the 93 stations reporting was 8.29 inches which is 3.50 inches above the mean for the past 45 years. Monthly totals ranged from 1.85 inches at Magnolia to 16.35 inches at Lutherville. Six stations in the northern portion had monthly amounts exceeding 14.00 inches and a number more than 10.00 inches, while those in the southern third of the State received less than the normal amount. The greatest amount measured in any 24-hour period was 6.00 inches at Dardanelle on the 22d.

The weather was generally unfavorable for farm work in northern and west-central portions during the month, mostly favorable in the southern portion. Considerable corn was planted in southeastern counties about the close of the month and a small amount of cotton. A large portion of the commercial potato crop could not be planted until too late for the early market. The weather was favorable for growth of all vegetation, very little frost damage occurring during the month. More than 200,000 acres of land were inundated in the White, Black and St. Francis river basins following the heavy rains from the 10th to the 12th, this being the worst flood since 1927. Losses from floods were as follows: On the Arkansas and Petit Jean rivers, $39,400; on the Black and White rivers, $246,100; the St. Francis river, $676,100. T.A.M.

Tornadoes

Crossett (9 miles east of), during afternoon of 4th, from sw. path narrow, $500 damage to Crossett Camp buildings. Russellville (7 miles northeast of), 10th, 8 p.m., from sw, 2000 feet wide, 4 people injured, $20,000 damage to property and $1,000 damage to fruit trees. Havana, 10th, 11 p.m. from nw, 600 feet wide, property damage $1,000.

Moderate Hail, Helena, 28th. no damage.

Heavy Hail, Marianna, 27th, no report on damage.

Correction: February, 1935

Paragould, prevailing wind direction should be se.

ARKANSAS SECTION

H. S. COLE

VOL. XL LITTLE ROCK, ARK., APRIL, 1935 No. 4

GENERAL SUMMARY

Temperature and precipitation were both below normal in April but the most unusual feature of the weather for the month was the large number of days with dust. The dust storm of the 11th was probably the worst ever experienced in Arkansas. The sun was entirely obscured during most of the day and the visibility was reduced to about 1200 feet in the early morning. The sun was not visible after 4 p. m. in the afternoon in the central part of the State.

The mean temperature for the State, based on the reports of 58 stations, was 60.2° which is 1.3° below the mean for the past 45 years. Stations in the northern half of the State had negative departures while some in the southern portion had positive. Monthly means ranged from 55.1° at Bentonville and Deer to 65.1° at Warren. Temperatures were freezing or slightly lower in some northern and western portions on the 8th or 13th but damage to vegetation was small. The highest temperature reported was 90° at Hope on the 25th; the lowest, 29° at both Eureka Springs and Sunset on the 8th and at Gravette and Mount Ida on the 13th.

The average precipitation for the State for the 89 stations reporting was 4.37 inches which is 0.52 inch below the average for the past 45 years. Of the stations with records of 10 years or more, 26 had positive departures and 49 negative. Monthly totals ranged from 1.47 inches at Cotter to 8.56 inches at Danville. The distribution of rainfall during the month was reversed to that of March in that the southern part of the State received the heaviest rainfall and the northern portion the least. The greatest amount measured in any 24-hour period was 4.10 inches at Danville on the 19th.

The weather during the month was mostly unfavorable for farm work. Spring planting was delayed in northern and most central sections the first half of the month while some cotton and corn were planted in the southern portion. Conditions were unfavorable for cotton and corn and some will have to be replanted. Strawberries were damaged in the southern portion by the cold, wet weather, but conditions were favorable for growth of wheat, oats, meadows and pastures. T.A.M.

TORNADOES:--Joiner, 5th, 2:00 p. m., from nw, path 100 feet wide, 6 people injured, property damage $7,000. Arkadelphia, (1-3 miles north of), 5th, 3:30 p. m., from nw, path 600 feet wide and 4 miles long, 3 people injured, $2,000 damage to buildings and $4,000 damage to timber. Grannis, (2 1-2 miles northeast of), 19th, 8 p. m., from sw, about 900 feet wide, $5,000 damage to timber.

HEAVY HAIL:---Brentwood and Woolsley, 6th, severe damage to gardens and automobile tops. Carlisle, Hazen, Lonoke and vicinities, 6th, $30,000 damage to roofs of buildings, automobile tops and gardens. This hailstorm was about 10 miles wide in Lonoke and Prairie counties. Hailstones were as large as hen eggs at a number of places and some as large as baseballs in Lonoke. Considerable damage to roofs and crops was reported on the 6th at Jacksonville, Palarm, McCrory, and near Thornburg, slight damage at Marshall on the 7th, at Amity on the 19th, and considerable at Danville, 19th.

ol. XL Little Rock, Ark., May, 1935 No. 5

GENERAL SUMMARY

This was the wettest May since 1930 and the coolest since 931. Temperatures were generally below normal from the 3d the 7th and from the 15th to the 26th, with departures exeeding 10° on the 4th, 5th, 17th, and 24th, while the warmest eather occurred about the 12th or 31st. The average temerature for the State, based on the records of 60 stations, was 6.7° which is 2.3° below the mean for the past 45 years. Of e stations with records of 10 years or more, only one, El orado in a southern border county, had a positive departure. onthly means ranged from 58.8° at Deer to 71.3° at El Doado. The highest temperature reported was 94° at Dumas nd Subiaco on the 12th and at Carthage on the 31st; the west, 35° at Dutton on the 7th. The greatest daily range as 39° at Thornburg on the 7th.

The average precipitation for the State for the 92 stations reorting was 8.86 inches which is 3.79 inches above the mean r the past 45 years. Rainfall was heavy to excessive in most ections from the 1st to the 6th, some stations in the western ortion reporting more than 7.00 inches for the period and a umber from 4.00 inches to 6.00 inches. Another period of eavy rainfall occurred from the 14th to the 20th but amounts ere not as large in many sections as from the 1st to the 6th. ocally heavy rains again fell over a large portion of the State ither the 28th or 29th, some stations reporting 2.00 inches or ore. Monthly amounts ranged from 3.05 inches at Portland a southeastern county to 16.10 inches at Conway in the central ortion. The greatest amount measured in any 24-hour period as 4.23 inches at Waldron on the 4th.

The heavy to excessive rainfall and low temperatures were nfavorable for cotton in most sections. Planting was not comleted in some northern localities even at the close of the onth and much replanting was necessary in central and orthern portions. Cultivation and chopping progressed rapidy the latter part of the month in southern counties where rainall was lightest. In the northern portion cultivation was bady needed. Corn fared better than cotton but much land has not been planted because of the continued wet weather. Stands are poor in many localities and it needs cultivation badly in northern and western portions.

T.A.M.

The heavy rains caused flood stages to be reached at most points on he rivers with losses as follows:--On the Arkansas, $27,865; on the uachita, $143,000; on the White and Black, $66,700.

TORNADOES:--Dermott, 2d, 5:45 p.m., path narrow, one killed, none njured, property damage $2,000. Mississippi County, 2d, 6:30 p.m. to :30 p.m., from sw, path 35 miles long extending from Frenchman's Bayou ne to Armorel, 3 killed, 23 injured, property damage $100,000. Little Rock, 18th, from s, path narrow, several persons received minor njuries, property damage $30,700.

WINDSTORMS:-Clarendon and vicinity, 2d, two smokestacks blown down several houses unroofed and others damaged, loss $1,000. Harrisburg and vicinity, 2d, severe windstorm, houses and barns unroofed, property damage $3,300. Southeastern part of Union County, 2d, severe windstorm, houses unroofed and damaged over a territory 15 miles long, one person killed, property damage $12,000. Melbourne, 2d, windstorm damaged two houses and demolished two barns, loss $500. Massard Prairie(5 miles se of Fort Smith), 13th, several buildings were demolished and a number of residences damaged.

KILLED BY LIGHTNING:--Pine Bluff, 2d, one. Injured by lightning, near Melbourne, 2d, five people injured when lightning struck house.

HEAVY HAIL:--Ferndale and vicinity, 10th, several hundred dollars damage to gardens, crops, and roofs of buildings.

H. S. COLE

ol. XL Little Rock, Ark., June, 1935 No. 6

GENERAL SUMMARY

This was the coolest and wettest June since 1928 and the cond wettest on record. Temperatures were generally below rmal from the 3d to the 10th and from the 14th to the 23d, hile they were above for about 7 days with the warmest eather occurring the 11th or 12th or during the latter part of e month. The average temperature for the State, based on e records of 60 stations, was 74.3° which is 2.8° below the ean for the past 45 years, all stations except Warren in the utheastern portion having negative departures. Monthly eans ranged from 67.0° at Dutton to 79.0° at Warren. The ghest temperature reported was 98° at Dumas on the 26th; e lowest, 36° at Dutton on the 5th. The minimum of 36° within one degree of the lowest ever recorded in the State for ne, 35° being reported from Dutton on June 1st, 1931.

Rainfall was heavy to excessive in the Ozarks and the achita mountains and in most sections of northeastern and uthwestern portions, while some stations in the southeastern rtion and in southern border counties had less than the rmal amount. The average precipitation for the State for the stations reporting was 8.38 inches which is 4.29 inches ove the mean for the past 45 years. Monthly totals ranged om 2.67 inches at Portland in a southeastern county to 18.85 ches at Dutton in the Ozarks. Four other stations had onthly totals exceeding 16.00 inches and a number more an 10.00 inches. The greatest amount measured in any 24-ur period was 6.05 inches at Waldron on the 16th.

The heavy rains in the mountains and in eastern Oklahoma pt the Arkansas, White, and Black rivers near flood stage or ove at most points during the greater portion of the month. e Arkansas River was flood stage or above at Ft. Smith for 22 ys and at Little Rock for 15 days. The stage of 28.2 feet at ttle Rock on the 23d is the highest stage on record for June d the stage of 32.2 feet at Pine Bluff is within 0.2 foot of e high water mark of 1927. Hundreds of thousands of acres farm lands were inundated in the lowlands. Nearly all vees above Little Rock on the Arkansas River broke and all owing crops were destroyed. This was the worst flood in the ate since 1927. The high water coming so late in the season stroyed cotton which cannot be replanted with much assurnce of a crop, while the corn and hay crops may be replanted. long the White and Black rivers the damage was not so great t in the lower White basin considerable land will be idle this ar because of the high water. Considerable damage resulted om overflow along the Ouachita River but in the southern poron of the State crop conditions were much more favorable an elsewhere. Nearly all crops are late but by the latter rt of the month fields were being cleaned and crops were owing nicely in the southern portion. T.A.M.

Flood losses during the month were as follows:---On the Ouachita ver, $43,000; on the Arkansas and Petit Jean, $944,775; on the Black d White, $175,900.

Correction, May, 1935

Greatest 24-hour precipitation at Brinkley should be 1.69 inches.

Tornado:--Texarkana and vicinity, 21st, 8.30 a.m., from west, path 30 miles long and from 1-2 to 1 mile wide, beginning near New Boston, Texas and ending near Texarkana. In Arkansas 3 killed, 15 injured, property damage $100,000.

Windstorms:--17th, severe windstorms opproaching tornadic proportions general over Benton County, shade trees uprooted, power, telegraph, and telephone lines broken, small outbuildings blown down, several thousand dollars damage.

Heavy Hail:--In southeastern Johnson County, 6th, severe damage from hailstorm, path 1-2 to 1 mile wide, gardens, peach orchards, and crops destroyed, loss $16,000.

Helena, 7th, no report on damage.

Grannis, (3 to 5 miles southeast of), 20th, cotton, corn, and other crops destroyed, loss $1,000.

ARKANSAS SECTION

H. S. COLE

VOL. XL LITTLE ROCK, ARK., JULY, 1935 No. 7

GENERAL SUMMARY

Temperatures were above normal in the northwestern portion of the State during the month except for four or five days, while they were not quite so high in central and eastern portions. The warmest weather occurred in most sections during the latter part of the month when temperatures were near 100° in the northern portion and 100° or slightly higher in central and southern portions. The average temperature for the State, based on the reports of 62 stations, was 82.2° which is 1.8° above the mean for the past 45 years, only two stations having negative departures. Monthly means ranged from 75.8° at Dutton to 85.0° at Fort Smith and Hot Springs. The highest temperatures reported was 107° at Hot Springs on the 31st; the lowest, 53° at Dutton on the 15th. The greatest daily range was 39° at Rogers on the 14th and at Mount Ida on the 15th.

Showers occurred during the first three days of the month with an inch or more rainfall at a number of stations. Rainfall exceeding one inch occurred in the northwestern portion and in southwestern border counties either the 12th or 13th and light to moderate showers from the 20th to the 27th. The distribution was irregular and some sections received no rain after the 13th and in one instance none after the 3d. The average precipitation for the State for the 90 stations reporting was 2.31 inches which is 1.47 inches below the mean for the past 45 years. Of the stations with records of 10 years or more, only 17 had positive departures. Monthly totals ranged from 0.07 inch at Marianna to 5.93 inches at Wilson. The greatest amount measured in any 24-hour period was 4.80 inches at Dardanelle on the 13th. The average number of rainy days was 5.

The weather during July was mostly favorable for cotton. Some sections had too much rain the first few days of the month and fields were grassy because of the heavy rainfall during June, but with a week of fair weather much improvement was noted. The greater portion of the crop is late except in some southern counties. Some cotton was planted in the overflowed areas after the high water subsided. However, blooms were reported in central and southern portions during the first week of the month and in the northern portion by the middle of the month. The weather during the first half of the month was favorable for corn but thereafter in areas where no rainfall occurred it was too hot and dry. In some sections of the uplands and in the southern portion rain was needed badly at the close of the month and considerable damage was reported. Meadows, pastures and truck crops were also damaged in some localities. Rice is in good condition.

T.A.M.

Tornado:

Jasper, 12th, 2:15 p. m., from northeast, path 300 ft. wide, three people injured, property damage $75,000.

Moderate Hail:

17th, Sunset, no damage reported.

Corrections, June, 1935

Marked Tree:--Minimum temperature on 1st should be blank: others advanced one day: date of lowest should be 5th: mean minimum temperature should be 62.7°: mean temperature 73.8°: departure from normal −4.2°.

Error on page 26:--Pocahontas, mean temperature should be 81.4°; departure +1.2°.

ARKANSAS SECTION

H. S. COLE

Vol. XL LITTLE ROCK, ARK., AUGUST, 1935 No. 8

GENERAL SUMMARY

Although the average temperature for the State for August was not quite as high as that of the preceding month, maximum temperatures were higher in all sections. Temperatures were above normal in western and central portions except for three or four days until the 27th, while departures were not quite so marked in eastern sections. Several stations had 16 or more days with maximum temperatures 100° or higher with he warmest weather occurring generally from the 7th to the 11th. Cool weather overspread the State on the 28th and 29th, with departures ranging from 10° to 15° below normal on the 29th. The average temperature for the State, based on the records of 61 stations, was 82.0° which is 2.1° above the mean for the past 45 years, all stations having positive departures. Monthly means ranged from 76.0° at Dutton to 85.8° at Hot Springs. The highest temperature reported was 113° at Hot Springs on the 10th; the lowest, 46° at Batesville and Dutton on the 31st. The greatest daily range was 48° at Thornburg on the 10th.

Only a few widely scattered showers occurred during the first 11 days of the month but from the 12th to the 17th most sections had moderate to heavy rainfall, a number of stations reporting from one inch to more than three inches during this period. After the 17th showers again were scattered and some sections received little or no rain. The average precipitation for the 90 stations reporting was 1.74 inches which is 1.91 inches below the mean for the past 45 years. Only 9 of the stations with records of 10 years or more had positive departures and most of their rainfall was due to a locally heavy fall. Monthly totals ranged from 0.18 inch at Helena to 5.43 inches at Jessieville in the Ouachita Mountains. The greatest amount measured in any 24-hour period was 4.14 inches at Stuttgart on the 10th. The average number of rainy days was 4 which is 3 below the normal.

The weather the first 10 days of the month was favorable for cotton except in some portions of the uplands where it was too hot and dry. The showers which began the 12th caused considerable improvement in most sections but shedding was reported in some border counties and in a few localities in the Ozarks where rainfall was lightest. Army and leaf worms appeared in some localities the first part of the month but no serious damage occurred until the latter portion when poisoning was difficult because of the lack of dew. Picking began in the southern portion during the first decade and had become general in southern and central portions by the latter part of the month. The weather was too dry for late corn except in some localities where heavy showers occurred and the crop has been seriously damaged. Meadows and pastures are dry but have not been seriously injured except in a few localities. Sweet potatoes are fair to good in most portions but most garden truck has been badly damaged. Rice is in good condition but the planting of late truck and feed crops has been delayed because of the lack of moisture. T.A.M.

Errors on page 30:-Conway mean temperature should be 83.6°: departure from normal +2.2°. El Dorado mean temperature 84.4°: departure +2.6°.

H. S. COLE

VOL. XL LITTLE ROCK, ARK., SEPTEMBER, 1935 No. 9

GENERAL SUMMARY

Temperatures during the first two weeks of September were generally somewhat below normal while they were continuously above thereafter until the 25th, with the warmest weather occurring in most portions from the 22d to the 24th. Cool weather overspread the State on the 26th and continued until the 30th, nearly all stations reporting the lowest temperature for the month either the 28th or the 29th. The average temperature for the State, based on the reports of 58 stations, was 72.4° which is 1.9° below the mean for the past 45 years. Of the stations with records of 10 years or more, only 5 had positive departures. Monthly means ranged from 65.4° at Dutton to 76.1° at Hot Springs. The highest temperature reported was 103° at El Dorado on the 16th; the lowest, 35° at Dutton on the 29th. The greatest daily range was 45° at Marked Tree on the 28th.

Showers occurred in many sections from the 2d to the 4th and in nearly all portions from the 8th to the 10th. General rains fell from the 25th to the 28th, a number of stations reporting 2.00 inches or more either the 26th or 27th. The average precipitation for the State for the 89 stations reporting was 3.13 inches which is 0.24 inch below the mean for the past 45 years. Monthly totals ranged from 0.84 inch at Danville to 7.43 inches at Conway. One other station had less than an inch while 16 stations had over 4.00 inches. The northwestern portion of the State had mostly negative departures, while the heaviest rainfall occurred in northeastern, central and southwestern portions. The greatest amount measured in any 24-hour period was 4.70 inches at Arkadelphia on the 27th. The average number of rainy days was 5.

The weather during September was mostly favorable for cotton in the lowlands but in much of the uplands the soil became too dry for growth before the last of the month. Cool nights the first part of the month caused some shedding and leafworms did considerable damage in many localities, for poisoning was difficult because of the lack of dew. The moderate to heavy rains from the 26th to the 28th were favorable for the development of the top crop of cotton in the lowlands but in the uplands the plants had already nearly quit blooming or were blooming in the top. The dry weather was favorable for the picking of cotton. Picking had begun in the southern portion of the State in August, and by the latter part of September the crop was nearly picked in some southern localities, about half picked in some localities in the central portion, and picking had begun in the northern. The weather was too dry for corn in most portions and the late crop was badly damaged except in some localities where showers were heaviest. Apples were damaged by the drought in the northwestern portion, also tomatoes, meadows, pastures, and truck. It was too dry for sowing wheat and oats and for planting of fall truck until the rains the last of the month. The weather was favorable for ripening and harvesting rice, but too dry for late rice which still had to be irrigated in some localities until the latter part of the month.

T.A.M.

Correction: August, 1935.--Center Point, number of partly cloudy days should be 7, cloudy 1.

VOL. XL LITTLE ROCK, ARK., OCTOBER, 1935 No. 10

GENERAL SUMMARY

Temperature and precipitation were both above normal, this being the wettest October since 1926. The cool weather of the latter part of September continued until the 9th of October with departures as much as 16° below normal on the 6th. Another cool spell lasted from the 23d to the 25th, while temperatures were considerably above normal in nearly all sections much of the remainder of the time. Frost occurred in central, northern, and eastern portions of the State on the 7th but vegetation was killed only in some northeastern, east-central, and mountainous sections. The average temperature for the State, based on the reports of 60 stations, was 63.8° which is 1.2° above the mean for the past 45 years. Monthly means ranged from 57.2° at Dutton to 70.0° at El Dorado. Of the stations with records of 10 years or more, only 7 had negative departures. The highest temperature reported was 95° at El Dorado on the 15th; the lowest, 27° at Wynne on the 7th. The greatest daily range was 48° at Okay on the 3d.

Showers occurred from the 5th to the 10th and again on the 14th and 15th, daily amounts of an inch or more being reported only at a few northwestern stations, but from the 18th to the 28th general rains fell in nearly all sections with only a few days intervening. Rainfall was excessively heavy in the east-central portion on the 23d, stations in Cross, St. Francis, and Crittenden counties reporting from four to more than six inches. The average precipitation for the State for the 90 stations reporting was 4.94 inches which is 1.81 inches above the mean for the past 45 years. Monthly totals ranged from 1.89 inches at El Dorado to 10.69 inches at Madison. Of the stations for which normals have been computed, only 16 had negative departures. The greatest amount measured in any 24-hour period was 6.30 inches at Parkin on the 23d. The average number of days with 0.01 inch or more was 9 but Sunset in the Ozarks had 16 rainy days.

The dry weather the first of the month was favorable for picking cotton but it was too cool for the growth of the late crop. Picking was delayed the latter half of the month by the continued cloudy, rainy weather and the heavy rains did considerable damage to open cotton. Grown bolls opened slowly and young bolls decayed where rainfall was heaviest. The frost and freezing temperatures on the 7th did considerable damage to cotton and late corn in northeastern and east-central portions of the State. The weather was unfavorable for gathering early corn and for harvesting and threshing rice, but was very favorable for the growth of wheat, oats, cover crops, and winter truck. The soil was too dry in a few southern localities where rainfall was lightest even at the close of the month but elsewhere was in good condition for fall plowing and planting.

Moderate Hail:--Sunset, 28th, slight damage.

Corrections:--September, 1935

Paragould precipitation departure should be −0.29.

Marked Tree; observation on 26th missed. Maximum temperature on 25th should be blank; 26th 77°; 27th 57°; 28th 70°; 29th 88°; 30th 80°. Minimum temperature on 26th blank; 27th 52°; 28th 51°; 29th 43°; 30th 43°. Mean maximum 85.4[a]°; mean minimum 56.2[a]°; mean temperature 70.8[a]°; departure from normal −2.8°; lowest 43[a]° on 29th†. Greatest daily range 45[b].

El Dorado, minimum temperature on 1st should be 56°, others should be set forward one day; lowest 48° on the 29th; greatest daily range 43°.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

H. S. COLE

Vol. XL Little Rock, Ark., November, 1935 No. 11

GENERAL SUMMARY

Though the mean temperature for November was somewhat below normal, freezing temperatures did not occur except in the northern portion of the State until after the middle of the month. Temperatures were high for the season of the year on the 3d, 4th, and 10th with departures as high as 20° above normal in the central portion on the 10th, while they were 10° or more below normal on the 12th, 13th, 16th, and 23d. The average temperature for the State, based on the reports of 58 stations, was 49.8° which is 1.7° below the mean for the past 45 years. Of the stations for which normals have been computed, only 8 had positive departures. Monthly means ranged from 43.6° at Gravette in the extreme northwestern portion to 56.6° at El Dorado in a southern border county. The highest temperature reported was 89° at Dumas on the 10th; the lowest, 16° at Batesville on the 23d. The greatest daily range was 48° at Mount Ida on the 31st.

Rainfall was frequent the first 12 days of the month but thereafter, except for a few scattered showers on the 15th, 16th and 19th, fair weather prevailed until the rainy period from the 25th to the 28th. The average precipitation for the State for the 88 stations reporting was 3.81 inches which is 0.11 inch above the mean for the past 45 years. Of the stations with records of 10 years or more, 35 had negative departures and 41 positive. Monthly totals ranged from 1.59 inches at Newport to 8.14 inches at Hope. Rainfall was lightest in northeastern and extreme west-central portions, 6 stations having less than 2.00 inches, while it was heaviest in the southern half of the State, with 2 stations reporting over 7.00 inches. The greatest amount measured in any 24-hour period was 4.40 inches at Hope on the 11th. A trace of snow was reported at Grannis on the 28th and light glaze at Freeman Springs and Sunset on the 12th.

The weather the first half of the month was very unfavorable for cotton. Late bolls opened slowly, picking was delayed, and open cotton was damaged by the continued damp, rainy weather. The latter half of the month was much more favorable for out-door work. The picking of cotton was about finished except in the eastern lowlands where a considerable amount remained in the fields even at the close of the month. Corn was gathered rapidly except the late crop which had not quite matured. The freezing temperatures from the 21st to the 23d stopped the growth of all summer and fall crops which were not killed October 7th. Some late corn was damaged but most of it had nearly matured. The growing season for the year 1935 was somewhat longer than usual in most portions of the southern half of the State. The weather was favorable during the month for the growth of wheat, oats, meadows, and pastures. It was also favorable the latter half of the month for winter plowing and other late fall and winter work. T.A.M.

Tornado:—Fayetteville (1 1-2 miles nw of), 9th, 7 p. m., from sw, path 450 feet wide and 1-4 mile long, 300 trees in a woodlot blown down, loss about $1,500.

Corrections:-.October, 1935. Hope mean minimum should be 53.7°; Stuttgart mean temperature 65.4°, departure +2.3°; State mean 63.9°, departure +1.3°.

VOL. XL LITTLE ROCK, ARK., DECEMBER, 1935 No. 12

PRICE: 5 Cents per Copy; 50 Cents per year

GENERAL SUMMARY

This was the coldest December since 1917. Temperatures were considerably below normal in central and eastern portions of the State during the first week of the month and nearly continuously below the latter half with departures as much as 22° below normal in the extreme eastern portion on the 26th. The average temperature for the State, based on the reports of 58 stations, was 37.6° which is 5.0° below the mean for the past 45 years. All stations had negative departures which ranged from 1.5° below normal at Morrilton to 8.2° below at Blytheville. Monthly means ranged from 33.4° at Corning to 43.2° at Magnolia. The highest temperature reported was 73° at Magnolia on the 1st; the lowest, 4° below zero at Lead Hill on the 30th. The greatest daily range was 49° at Lead Hill on the 30th.

Heavy rains occurred from the 5th to the 8th in nearly all sections of the State except in the extreme eastern portion, amounts of from 2.00 inches to more than 4.00 inches being reported from west-central, northwestern, and southwestern portions. Snow fell in the southern half of the State on the 21st and 22d, with Index and Portland reporting depths of 5.0 inches. From the 27th to the 29th rain, sleet, and snow fell in most sections with stations in the Ozarks and the northern portion receiving 6.0 inches or more. Ice formed on most highways and travel was hazardous. A number of accidents occurred in which one person was killed and a score or more injured. Bus service was suspended in some instances. The average precipitation for the State for the 92 stations reporting was 2.95 inches which is 1.31 inches below the mean for the past 45 years. Of the stations with records of 10 years or more, 20 had positive departures and 56 negative. Monthly totals ranged from 0.76 inch at Clarendon to 5.95 at Lutherville. The greatest amount measured in any 24-hour period was 5.09 inches at Lutherville on the 6th. Snowfall ranged from a trace at three southwestern stations to 9.0 inches at Dutton in the Ozarks. The average number of rainy days was 5 and the average snowfall for the State for the 91 stations reporting was 2.8 inches.

The heavy rains the first of the month caused rapid rises in the Red, White, Arkansas, and Ouachita rivers but flood stages were reached only at Danville on the Petit Jean and at Arkadelphia on the Ouachita. Flood losses reported were as follows: On the White River, $9,000; on the Arkansas, $1,500; on the Ouachita, $1,000.

The weather during December was mostly too cold for the picking of the small amount of cotton remaining in the eastern lowlands but was favorable for the gathering of corn and other field crops and for plowing and other winter work except during the rainy periods the first and latter portions of the month. The snow cover the last of the month was very favorable for wheat, oats, and winter truck and prevented much damage from the low temperatures. T.A.M.

Corrections on Page 46:--Mean temperature and departure from normal: Bee Branch should be 38.4° −3.6, Calico Rock 35.8° −3.3.

VOL. XL LITTLE ROCK, ARK., YEAR, 1935 No. 13

PRICE: 5 Cents per Copy; 50 Cents per year

GENERAL SUMMARY

The salient features of the weather in Arkansas during the year 1935 were the cold waves in January, February, and December, the dust storms in April, and the floods in March, May and June.

Temperatures were above normal the first three months of the year and in July, August, and October, below in other months. Cold waves occurred in January and February but temperatures were not extremely low, sub-zero temperatures occurring only in January at stations in the northwestern portion. March was the warmest March since 1921 and the wettest since 1922. The most unusual feature of the weather in April was the large number of days with dust. The dust storm of the 11th was probably the worst ever experienced in the State. The sun was entirely obscured during most of the day and the visibility was reduced to about 1,200 feet in the early morning. The sun was not visible after 4 p. m. in the central part of the State. Both May and June were cool and wet, this being the coolest June since 1928 and the second wettest on record. High day temperatures prevailed the latter part of July and during the most of August but otherwise the summer was comparatively mild. Cool weather overspread the State the latter part of September and continued the first ten days of October. Frost occurred in central, northern, and eastern portions of the State on October 7th but vegetation was killed only in some northeastern, east-central, and mountainous sections. Temperatures were high for the season of the year the first part of November while the latter half was considerably colder with killing frosts occurring in most sections from the 21st to the 23d. December was cold, this being the coldest December since 1917 but the minimum of 4° below zero does not approach the record for the month.

The average temperature for the State was 61.4° which equals the mean for the past 45 years. Annual means ranged from 55.6° at Dutton in the Ozarks to 65.8° at Magnolia in a southern border county. Of the stations with records of 10 years or more, 21 had negative departures and 34 positive. Extremes ranged from 11° below zero at Deer in the Ozarks on January 21st to 113° at Hot Springs on August 10th.

The average precipitation for the State was 57.01 inches which is 8.66 inches above the mean for the past 45 years. Annual amounts ranged from 42.03 inches at Lead Hill to 85.31 inches at Lutherville. Of the stations with records of 10 years or more, 60 had positive departures and 18 negative. Precipitation was above normal in January, March, May, June, October, and November, below in other months with the least amounts in July and August. Snowfall was heavy in the southeastern portion and in southern border counties in January and in the west-central portion and the northern part of the State in December.

The last killing frost in spring occurred February 28th in most central and southeastern sections, March 7th to 17th elsewhere except at a few stations in southwestern and northwestern portions where it was April 13th. The first killing frost in autumn occurred October 7th in some north-central and northeastern portions, November 5th in most other sections of the Ozarks, and November 23d in most central and southern sections. The growing season ranged from 193 days at Blytheville and Marshall to 268 days at numerous other stations. Practically no damage was reported in spring but the early frost on October 7th damaged cotton, late corn, rice, and fall truck considerably in some east-central and northeastern localities.

In January heavy rains caused moderately high stages on the lower White, Black, and the St. Francis rivers and flood stages on the Petit Jean and Ouachita rivers, with damage of $17,295 reported. In March rainfall was excessive in the northern half of the State and more than 200,000 acres of land were inundated in the White, Black, and St. Francis river basins, this being the worst flood in that section since 1927. Damage was estimated at $961,600, with losses in the St. Francis basin being $676,100. In May flood stages were reached at most points on the rivers, with losses of $237,565 reported, 60% of which was in the Ouachita River basin. The heavy rainfall in the mountainous sections during June kept the rivers near or above flood stage during most of the month. The Arkansas river was flood stage or above for 22 days at Fort Smith and for 15 days at Little Rock. The stage of 28.2 feet at Little Rock is the highest June stage on record and the stage of 33.0 feet at Pine Bluff, 0.6 foot higher than that of 1927. Nearly all levees broke on the Arkansas River above Little Rock and all growing crops were destroyed. This was the worst flood in the State since 1927. Losses were over $2,000,000.

Fifteen tornadoes were reported during the year, three each in February, March, April, and May and one each in June, July, and December. The one in Mississippi County in May and the one at Texarkana in June were the most destructive, losses being $100,000 in each instance. During the year 7 persons were killed by tornadoes, 60 injured, and property valued at $365,200 destroyed.

Windstorms were not as violent as in the preceding year, losses being confined mostly to January, May, and June. Damage from hailstorms occurred mostly in April and June and in two storms. In April in Lonoke and Prairie counties $30,000 damage was done to buildings, crops, and automobiles. Hailstones as large as hen eggs were reported at a number of places and as large as baseballs at Lonoke. In southern Johnson County in June, $16,000 damage occurred to crops, fruit trees, and buildings. The total loss for the year from hail was $47,900.

T.A.M.

WEATHER BY MONTHS

January:—This is the fifth successive January with temperatures considerably above the average. Precipitation was 1.50 inches above the normal, with monthly totals ranging from 2.48 inches at Gravette to 12.51 inches at Helena. The weather the first half of the month was favorable for out-door activities while the latter half was mostly unfavorable, the temperature being too low and the soil too wet. Peaches were severely damaged in some localities by the cold wave of the 21st. The low of 11° below zero at Deer is the coldest in the State for January since 1930.

February:—Mild weather prevailed until the 24th when a cold wave overspread the State bringing temperatures as low as 8° to the western portion and 16° to the southeastern. Precipitation was somewhat below normal, only 7 stations reporting positive departures. Monthly totals ranged from 0.58 inch at Rogers to 5.23 inches at Warren. Considerable plowing was done in the northwestern portion during the month and in some upland sections elsewhere, but it was mostly too wet in the southern portion. However, spring oats, potatoes, and garden vegetables were planted in central and southern portions.

March:—Freezing temperatures occurred in nearly all sections the first half of the month and at a few stations in the northwestern portion on the 28th and 29th. Rainfall was heavy to excessive in many sections, causing floods in the White, Black, and St. Francis rivers. The average precipitation for the State was 8.29 inches which is 3.50 inches above the mean for the past 45 years. Monthly totals ranged from 1.85 inches at Magnolia to 16.35 inches at Lutherville. The weather was generally unfavorable for farm work in northern and west-central portions, mostly favorable in the southern where rainfall was near normal or below. Considerable corn was planted in southeastern counties about the close of the month and a small amount of cotton. The weather was also favorable for the growth of all vegetation, very little frost damage occurring during the month. Three tornadoes were reported in which four people were injured and property valued at $22,500 destroyed.

April:—Temperatures were freezing or slightly lower in some northern and western portions on the 8th or 13th but damage to vegetation was small. The average precipitation for the State was 4.37 inches which is 0.52 inch below the normal. Monthly totals ranged from 1.47 inches at Cotter to 8.56 inches at Danville. The distribution of rainfall was reversed to that of March in that the southern portion of the State received the heaviest rainfall and the northern portion the least. The most unusual feature of the weather was the large number of days with dust, the dust storm of the 11th being probably the worst ever experienced in the State. Conditions were mostly unfavorable for farm work and the growth of cotton and corn, some of which had to be replanted. Tornadoes and hailstorms did considerable damage, the loss being $18,000 from the former and $30,500 from the latter.

May:—This was the wettest May since 1930 and the coolest since 1931. The average precipitation was 8.86 inches which is 3.79 inches above normal. Monthly amounts ranged from 3.05 inches at Portland to 16.10 inches at Conway. The heavy to excessive rainfall and the low temperatures were unfavorable for cotton in most sections. Planting was not completed in some northern localities even at the close of the month and much replanting was necessary in central and northern portions. Conditions were more favorable for corn but stands were poor and cultivation badly needed in northern and western portions. During the month 4 people were killed by tornadoes, 23 injured, and property valued at $132,700 destroyed. The loss from windstorms was $21,800.

June:—The average temperature for the State was 2.8° below normal, while precipitation was heavy to excessive in most sections except in the southeastern portion and in southern border counties where it was less than normal. Monthly totals ranged from 2.67 inches at Portland to 18.85 inches at Dutton. Four other stations had monthly totals exceeding 16.00 inches and a number more than 10.00 inches. Flood damage was over $2,000,000. The high water coming so late in the season destroyed cotton which could not be replanted with much assurance of a crop. Along the White and Black rivers the damage was not so great as in the Arkansas basin but considerable land was idle in the lower White basin because of the high water. A tornado struck Texarkana and vicinity on the 21st in which 3 people were killed, 15 injured, and property valued at $100,000 destroyed. A severe windstorm, approaching a tornado, was general over Benton County on the 17th, doing several thousand dollars damage.

July:—Temperatures were above normal in the northwestern portion of the State during the month except for four or five days, while they were not quite so high in central and eastern portions. The average precipitation was 2.31 inches which is 1.47 inches below normal. Monthly totals ranged from 0.07 inch at Marianna to 5.93 inches at Wilson. The distribution was irregular, some sections receiving no rain after the 13th and in one instance none after the 3d. The weather was mostly favorable for cotton but too hot and dry for corn the latter half of the month, especially in areas of light rainfall. The greater portion of the cotton crop is late except in some southern counties and some cotton was planted in the overflowed areas after the high water subsided.

August:—Although the average temperature for the State was not quite so high as that of the preceding month, maximum temperatures were higher in all sections. Temperatures were above normal in western and central portions except for three or four days until the 27th, while departures were not quite so marked in eastern sections. Only a few widely scattered showers occurred during the first 11 days of the month but from the 12th to the 17th most sections had moderate to heavy rainfall. Monthly totals ranged from 0.18 inch at Helena to 5.43 inches at Jessieville, with only 9 stations having positive departures. The weather was too dry for late corn except in some localities where heavy showers occurred and the crop was seriously damaged. Rice was in good condition but the planting of late truck was delayed because of the lack of moisture.

September:—The average temperature was 1.9° below normal while precipitation was only 0.24 inch below. Monthly totals ranged from 0.84 inch at Danville to 7.43 inches at Conway. The northwestern portion of the State had the least rainfall, while the heaviest occurred in northeastern, central, and southwestern portions. It was too dry in the uplands for cotton but mostly favorable in the lowlands. Cool nights the first part of the month caused some shedding and leafworms did considerable damage in many localities. Poisoning was difficult because of the lack of dew. The moderate to heavy rains from the 26th to the 28th were favorable for the development of the top crop of cotton in the lowlands but in the uplands the plants had already nearly quit blooming or were blooming in the top. It was too dry for corn in most portions and the late crop was badly damaged except in some localities. Apples, tomatoes, meadows, pastures, and truck were also damaged and it was too dry for planting of fall truck until the rains the last of the month. Picking of cotton began in the southern portion in August and by the latter part of September the crop was nearly picked in some southern localities, and about half picked in some localities in the central portion.

October:—Temperature and precipitation were both above normal, this being the wettest October since 1926. Showers occurred during the first half of the month but from the 18th to the 28th general rains fell in nearly all sections with only a few days intervening. Rainfall was excessively heavy in Cross, St. Francis, and Crittenden counties on the 23d, Parkin reporting 6.30 inches. The weather the first of the month was favorable for picking cotton but it was too cool for the growth of the late crop. The frost and freezing temperatures on the 7th did considerable damage to cotton and late corn in northeastern and east-central portions. Cotton picking was delayed the latter half of the month and the heavy rains did considerable damage to open cotton.

November:—The average temperature was 1.7° below normal with only 8 stations having positive departures. Rainfall was frequent the first 12 days of the month but thereafter, except for a few scattered showers, fair weather prevailed until the rainy period from the 25th to the 28th. Monthly totals ranged from 1.59 inches at Newport to 8.14 inches at Hope. The weather the first half of the month was very unfavorable for cotton. Late bolls opened slowly, picking was delayed, and open cotton was damaged. The latter half was much more favorable and the picking of cotton was about finished except in the eastern lowlands. Some late corn was damaged by the freezing temperatures from the 21st to the 23d but the most of it had nearly matured.

December:—Temperatures were considerably below normal in central and eastern portions during the first week of the month and nearly continuously below the latter half with departures as much as 22° below normal in the extreme eastern portion on the 26th. Precipitation was 1.31 inches below normal with

The departures from normal temperature and precipitation are computed only for stations having ten or more years record, but all complete reports are used in determining section means. T., less than 0.01 inch rain or melted snow. Reference letters [a], [b], [c], appearing in the table indicate number of days missing: for example [b] represents two days missing. † Also on later dates. ‡‡ Post-office addresses of these stations as follows:-Big Lake Outlet, Manilla, Ark., Freeman Springs, Dover Ark., Index, Route 5, Texarkana, Ark., Lutherville, R. F. D. No. 1, Lamar, Ark., Rosebud, Mount Vernon, Route 2.

Continued from page 50

20 stations having positive departures and 56 negative. Monthly totals ranged from 0.76 inch at Clarendon to 5.95 inches at Lutherville. Snowfall was heavy in some southern sections on the 21st and 22d, three stations reporting depths of 5.0 inches. From the 27th to the 29th rain, sleet, and snow fell in most sections. Ice formed on the highways and travel was hazardous. A number of accidents occurred and bus service was suspended in some instances. The snow cover was favorable for wheat, oats, and winter truck and prevented much damage from the low temperatures.

Corrections:--Precipitation

Dutton, May, total should be 10.79 inches; Index, March, departure from normal −0.90 inch; Paragould, September, departure −0.29; Pocahontas, June, departure +6.51; Springbank, October, departure −0.57; Stuttgart, March, departure −0.43; Waldron, August, total 3.55 inches.

H. S. COLE

Vol. XLI   Little Rock, Ark., January, 1936   No. 1

Price: 5 Cents per Copy; 50 Cents per year

GENERAL SUMMARY

This was the coldest January since 1930 and the driest since 1911, which was the driest on record. Mild weather prevailed the first half of the month, with departures considerably above normal from the 10th to the 17th, but much colder weather overspread the State on the 18th and continued with but little interruption until the end of the month. Means were considerably lower in central and eastern portions, with a number of days with the maximum temperature below freezing. The average temperature for the State, based on the reports of 56 stations, was 37.1° which is 4.2° below the mean for the past 46 years. All stations had negative departures which ranged from 1.8° below normal at Hot Springs to 8.2° below at Blytheville. The highest temperature reported was 83° at Magnolia on the 16th; the lowest, 1° below zero at Portland on the 24th, and at three other stations later in the month. The greatest daily range was 47° at Okay on the 11th.

Precipitation was generally light to moderate the first ten days of the month with a few stations reporting heavy rains on the 6th, while during the latter half it was mostly in the form of sleet or snow. The average snowfall for the State for the 92 stations reporting was 3.5 inches which is the highest average for January since 1930. The greatest depth for the month reported was 8.8 inches at Warren, with two other stations in the southeastern portion having monthly totals of 8.0 inches. The average precipitation for the 91 stations reporting was 1.05 inches which is 3.17 inches below the mean for the past 46 years. Monthly totals ranged from 0.13 inch at Fayetteville to 4.59 inches at Crossett. Stations in the northern portion generally had monthly amounts of less than one inch with a number reporting less than one-half inch, while the southeastern portion had the heaviest rainfall. The average number of rainy days was 5 which is two less than the normal. Streams remained at low stages during the month and some were frozen in the northern portion during the latter part.

The weather the first half of the month was favorable for out-door activities, fields being cleaned and some plowing done in central and southern portions, while the latter half was too cold, the ground being frozen most of the time especially in central and northern portions. The snow cover protected wheat, oats, meadows, and winter truck where heavy enough but these crops have been badly frozen in many localities.

T. less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ^{a},^{b},^{c}, number of days missing. †Also on other dates. ‡‡P. O. addresses as follows:—Big Lake Outlet, Manilla; Cornerstone, Altheimer, Route 1; Freeman Springs, Dover; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rosebud Mt. Vernon, Route 2. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ||||24 hour ending 7 a. m. *Included in next measurement. Data in italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations of 10 to 14 years the means are for the period to 1935, inclusive.

Daily Precipitation for January, 1936

VOL. XLI LITTLE ROCK, ARK., FEBRUARY, 1936 No. 2

PRICE: 5 Cents per Copy; 50 Cents per year

GENERAL SUMMARY

The cold weather the latter part of January continued for the first 22 days of February with but little interruption, making the period from January 18th to February 22d one of the longest periods of cold weather ever experienced in the State. Cold waves occurred on the 4th, 9th, and 18th but the one of the 18th was most severe. Rivers in the northern portion of the State were frozen for the first time in many years. The Arkansas River at Little Rock was practically frozen over on the 9th and was partially frozen on the 20th. Temperatures rose rapidly on the 23d, mild weather prevailing until the end of the month.

The average temperature for the State, based on the reports of 57 stations, was 36.5° which is 7.0° below the mean for the past 46 years. All stations had negative departures which ranged from 5.0° below normal at Carthage to 11.8° below at Marshall. Monthly means ranged from 30.6° at Nail in the Ozarks to 45.0° at Magnolia in a southern border county. The highest temperature reported was 89° at Magnolia on the 26th and 29th; the lowest, 15° below zero at Lead Hill on the 18th, which is the lowest temperature for February since 1929.

Precipitation occurred at frequent intervals during the first 20 days of the month but amounts were generally light to moderate. Fair weather prevailed the latter part of the month except for rain either the 26th or 27th, a few stations reporting over an inch during this time. Snowfall was somewhat above the average, amounts being heaviest along the southern slope of the Ozarks, and in central and northeastern portions. Glaze formed on the 1st and 2d but was not heavy enough to do much damage. The average precipitation for the State for the 92 stations reporting was 1.70 inches which is 1.59 inches below the mean for the past 46 years. All stations had negative departures, with 5 stations having monthly amounts of less than 1.00 in. Monthly totals ranged from 0.77 inch at Index to 3.73 inches at St. Francis. The greatest amount measured in any 24-hour period was 1.35 inches at Mt. Ida on the 26th.

The weather was decidedly unfavorable for out-door activities until the 22d but thereafter very favorable. Wheat, oats, and meadows were damaged by freezing where not protected by snow cover. Rain is needed in the northwestern portion, water in wells being low and all streams at low stages. Precipitation has been below normal for the last three months, this being the driest winter on record. Some gardens and potatoes were planted the last of the month in the southern portion.
